Polished
Hook Potential: 19 - 11(dull/shiny)
Typical Length: 2 - 3
Typical Backend: 11
Center/Cover Heavy: 1.7
Track Flare Potential: 10+

Reaction Characteristics

The Attitude 3, the latest addition to the newest brand in the Brunswick arsenal, combines an “**Edge**” of Brunswick’s exclusive reactive urethane material and all-new multiple-color reactive urethane coverstock molding process and new “**Guts**”, a high performance combination of multiple density materials for unsurpassed on lane performance.

While ‘tude3 is toned down in its appearance from its predecessors, its performance is anything but, with the most aggressive hooking action available on the market today. Best suited for medium to oily lane surfaces.

Notes on Drilling

All weights of ‘tude 3 can be drilled using the techniques developed for two-piece balls. See Brunswick’s “Seven Popular Layouts” for detailed drilling information.
