

Brunswick[®] BVP[™] Nemesis[™] - Reactive

Part Number

60-104137-93X

Coverstock

PowrKoil 18 - Reactive
Color: Black/Orange Solid
Hardness: 76-78
Glow Engraving

Factory Finish

800-Grit Wet Sand

Core Dynamics @ 16#

RG Max: 2.580
RG Min: 2.536
RG Diff.: 0.044
Average RG: 4.6

Performance

Hook Potential: 125
Length: 85
Typical Breakpoint Shape: 60
Chart Position: O-17

Available Weights

10-16 Pounds

BVP
NEMESIS

BVP – Brunswick Value Performance – Exceptional Value and Great Performance

The Brunswick BVP[™] and Monster[™] ball lines were developed to provide the widest range of reactions available at the popular moderate price point. This line-up provides any bowler the ball performance they're looking for at a price they can afford.

Technology – Awesome Versatility

The universe of core/coverstock choices for bowling balls has greatly expanded in the last 12 years with the development of reactive and particle coverstocks and core system technology that can create a vast array of performance characteristics. Using these choices, Brunswick's engineers have been able to create optimum reaction match-ups for a wider range of bowlers and lane conditions than ever before.

While some core/coverstock combinations are more specialized in nature, others have an awesome versatility that has met with mainstream approval and acceptance. The **BVP Nemesis** targets just this type of ball reaction by employing core, coverstock and surface finish choices designed to help most bowlers match-up on typical house conditions.

Medium RG: With a RGmin. of 2.536 the **Nemesis** inverted bell core system is squarely in the mainstream range of balls like the Danger Zone & Teal Rhino Pro. More length than an Ultra Low RG ball. More able to create mid-lane recovery than a High RG ball. The **Nemesis** provides an optimum match-up for most bowler on typical house conditions.

Medium RG Differential: With an RGdiff. of 0.044 the **Nemesis** inverted bell core system will provide plenty of track flare for most bowlers without encountering the problems associated with over-flaring.

Aggressive Reactive Coverstock: PowrKoil[™] 18 has been on more bowling balls than any other Reactive coverstock in the bowling industry. Aggressive in the oil and strong off the dry, PowrKoil 18 is a perennial favorite among both bowlers and Brunswick's private label customers.

800-Grit Wet Sand Finish: The **Nemesis** is finished with an 800-grit wet sand finish which will allow most bowlers to match-up to both freshly oiled and moderately broken down house conditions. Plenty of traction on all but the oiliest lanes combined with a strong backend reaction.

Reaction Characteristics

- Out of the Box:** With its 800-grit wet sand surface, **Nemesis** matches up well on most medium to oily house conditions.
- When dulled:** The hooking action will increase and its arc will become more even, creating a better match-up for oily lane conditions and for smoothing over/under reactions seen on wet/dry lane conditions.
- When shined:** With Brunswick's Factory Finish High Gloss Polish, **Nemesis** will go longer in the oil and react stronger to the dry creating a more skid/snap arc.

Brunswick BVP Nemesis - Reactive

Drilling & Layouts

The *Nemesis* can be drilled using the standard drilling techniques developed for two-piece symmetric core balls. See the included drilling instructions for reaction characteristics and layout details.

Maintaining Your Ball Reaction

Brunswick recommends the following procedures to maintain and restore your Brunswick ball's reaction characteristics:

- Clean your Brunswick ball with **Brunswick Remove All** or similar ball cleaner after every use to reduce oil absorption.
- If you think your Brunswick ball has lost some of its "Out of the Box" reaction, restore the ball to its original factory finish listed on the product information sheet. This is especially important for balls that are highly sanded or polished. Use **Brunswick's Factory Finish High Gloss Polish** to restore the original factory finish on highly polished balls. For dull balls, wet sand with the sandpaper listed on the product information sheet.
- If after restoring the original factory finish you feel your Brunswick ball has still lost some of its hooking action, remove the oil from the ball by gently warming it with either the **Revivor** or **Rejuvenator** Pro Shop devices that have been designed for this purpose. This service is available, for a fee, at many Pro Shops. Brunswick's testing has shown that by combining the restoration of the **factory finish** with **oil removal** your Brunswick ball can maintain its original "Out of the Box" reaction for hundreds of games.

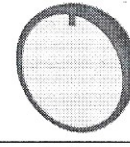

Note: Oil soaked balls tend to traction less in the oil and respond less to the dry boards on the lane. If you are matching-up using an oil soaked ball on wet/dry or broken down lane conditions, removing the oil from the ball will significantly change your match-up and possibly create undesirable over reactions.

Ball Comparisons

Want to compare the performance of this ball to other Brunswick balls? Go to our web site at www.brunswickbowling.com. Click on **Balls**, then click on **Pro Shop Information**. This page contains a link to the **Brunswick Ball Comparison Chart**. This chart allows you to see, at a glance, the performance of all Brunswick balls relative to each other, defined by their **Hook Potential** and **Arc Characteristics**. There's even an essay to help explain and guide you through the chart.

Lightweight Engineering

At Brunswick the unique core shape of each individual ball is used for all weights from 12 to 16 pounds. This approach to lightweight ball engineering is unique in the industry and provides bowlers with consistent ball reaction characteristics across this weight range. This approach also allows Pro Shops to drill lighter weight balls using the same layout techniques as heavier balls with confidence that the lighter ball doesn't need special drilling instructions due to the core shape being different.

Weight	16#	15#	14#	13#	12#	11#	10#
Core Shape							
RG-max.	2.580	2.593	2.609	2.628	2.670	2.771	2.802
RG-min.	2.536	2.549	2.565	2.584	2.634	2.769	2.800
RG-diff.	0.044	0.044	0.044	0.044	0.036	0.002	0.002
