

**W**hen a player is virtually unstoppable, they're in the zone. When a ball is virtually unbeatable, it is The Zone. The reason: Zone delivers the hook potential and backend reaction of highly reactive balls, which are less sensitive to changing lane conditions. Our Sapphire Blue is the third Zone in this series of high performance, highly adaptable balls. Get in the zone with the Zone. Only from Brunswick, and your favorite pro shop.

MORE  
HOOK,  
OUT OF  
THE  
BLUE.

GET IN!  
**SAPPHIRE ZONE™**

- OUTSTANDING EARLY RECOVERY. STRONG BACKEND REACTION.
- > **POWRKOIL 17 COVER STOCK:** MORE SKID-SNAP-HOOK ACTION. TRACKS WELL IN HEAVY OIL. MAINTAINS GOOD LENGTH THROUGH THE HEADS. EXCELLENT FOR MOST CONDITIONS—UNLESS YOU'RE BOWLING IN THE SAHARA.
  - > **BISMUTH GRAPHITE NUCLEUS:** THE DENSEST MATERIAL EVER PUT IN A BOWLING BALL. WORKS IN TANDEM WITH THE POWRKOIL TO DELIVER MAXIMUM HOOK—WITHOUT HOOKING TOO EARLY.

Featuring

**PowerKoil 17**  
COVERSTOCK

**60-101933**

The Sapphire Zone's early recovery and strong backend reaction give you a huge hook potential, as well as unbeatable performance on medium to oily lanes. It even tracks well in heavy oil and carry down, while maintaining good length through the heads. The Sapphire is an outstanding ball for all but the driest lane conditions.

"This lineup does a great job of holding the pocket on extremely challenging lane conditions."

Parker Bohn III,  
Brunswick  
Pro Staff

## BLACK AMBER ZONE / 60-101822

The Black Amber Zone delivers a smooth, even hooking action—in the heads and at the breakpoint. Although it excels on most any condition, it is especially suited for spotty/snaky (hook/skid/hook) lanes where current highly reactive balls tend to over-and-under-react. On conditions with drier heads, it can produce an arc/hold type of reaction (ball starts to arc in the heads before reacting very gently in the pine and backends, holding its line to the pocket).

It also works well on conditions with a hold area.

## RED ZONE / 60-101826

Out of the box, the Red Zone produces an early and even hooking action. When finished and laid out the same, the Red Zone has more skid/snap characteristics than the Black Amber. Its aggressive core design is better suited for conditions with smooth transitions in the oil pattern—both left-to-right and front-to-back. The Red Zone is excellent for conditions where the bowler has (or needs) to create swing area, or desires a more violent backend reaction.

## LISTEN, YOU GOT ENOUGH BALLS. NOW GET THE ATTITUDE.

Get a PBA title winner. Get harder, heavier hook. Get head-knocking attitude.
