

# VIRUS

## Become A Lane Hazard

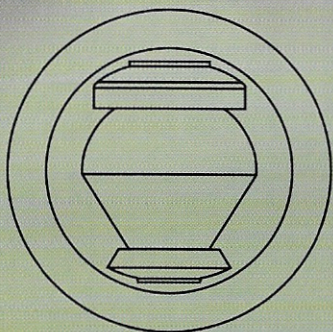

Introducing the newest edition to the Nu-Line products. The Virus is one sickness you won't want to get rid of! The Virus core body utilizes two flip blocks and is encased in an inner shell material, which produces a lower RG resulting in increased revolutions. The Mica Tak coverstock with the addition of Supernova has elevated the Virus performance to one of the strongest reactions on the market today.

Nu-Line is keeping with its tradition of being on the leading edge of performance while maintaining the quality you have come to expect.

Reaction:  
Skid/Snap

Radius of Gyration:  
2.50

Differential:  
.044

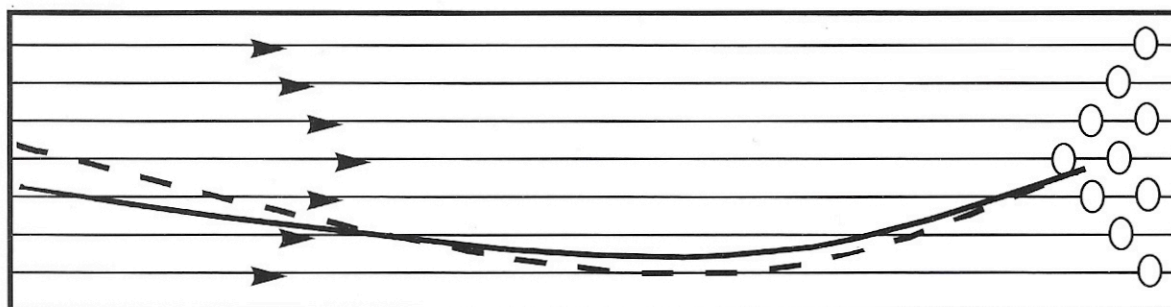

Finish:  
Polished

Color  
Purple Pearl

Lane Condition  
Medium to Oily

PBA approved

Nu-Line is proud to announce the Nu-Line Virus. The Virus utilizes inner shell technology to lower the Radius of Gyration resulting in more revolutions off your hand. The dual flip blocks allow the .044 differential to be utilized in all weights. The addition of Supernova to our Mica Tak coverstock increases gripping contact with the lane. All these elements in one package equals one thing - Performance!
