

Meet the ROTO-GRIP STARS

They cover the whole bowling universe

Consistency—professional performance that you can count on each and every time.

ROTO-GRIP GIVES IT!

Versatility—responsive to a variety of bowling styles and lane conditions.

ROTO-GRIP HAS IT!

Power—where you want it and when you need it.

ROTO-GRIP DELIVERS IT!

Quality—that stands head and shoulders above the competition.

ROTO-GRIP MAKES IT!

ROTO-STAR UC-2 PC MODEL / 100% URETHANE

As the demands of bowling lane conditions change, Roto-Grip meets the challenge. Now... Roto-Grip offers a NEW UC-2 ball. Our newest ball, the PC (Polyester Core), is on a roll. For moderately oiled conditions, it features:

- custom polishing by hand for a unique urethane finish.
- special formulated high-impact urethane shell.
- puddle weight block similar to our polyester "Blue Roto."
- custom crafted for durability and performance, the PC's tracking ability and extended roll puts the power where the pins are. Available in left- and right-hand models.

ROTO-GRIP SOFT POLYESTER

"Blue Roto" is an exclusive formulated soft pearlized polyester ball with Complete Weight Distribution. A special additive to the shell of the ball delays the initial roll and provides for a strong finish on a medium oil lane condition. Cores are specially selected and each ball is hand polished. "Blue Roto", winner of the \$210,000 first place 1982 Hi Rollers Tournament, *the richest prize in bowling history*. Roto-Grip R-H is available for right hand bowlers and Roto-Grip L-H for left hand bowlers.

ROTO-STAR UC-2 URETHANE

The *ULTIMATE CONCEPT* in bowling ball technology. The urethane shell provides maximum durability with high coefficient of friction for heavy oil conditioned lanes. Urethane cover provides low pin trajectory coupled with superior tracking characteristics which result in minimum skid and maximum roll. Available in right hand and left hand models.

Bowling balls that are light years ahead of the competition.

Roto-Grip

ROTO-STAR TRA-KER POLYESTER

A totally new concept in bowling ball design and only Roto-Grip makes its Polyester economy, Urethane performance, truly the best of both worlds using a blended formula of polymers never before used. Polyester feature extends early *skid-roll* and urethane feature maximizes *back* end action. Adaptable to a wide variety of oiled lane conditions. Available in right hand and left hand models.

ROTO-STAR X-2 MEDIUM HARD RUBBER

If you select one ball to perform well over a variety of conditions, the Roto-Star X-2 should be your choice. The best rubber ball available for today's typical lane finishes and conditions. The shell is made of high grade rubber which is hand polished for superior tracking. The Roto-Star X-2 has a medium hard rubber shell. The ball works well on a light oil conditioned lane. Available in right hand and left hand models.

ROTO-STAR SILVER STREAK HARD RUBBER

Especially designed to hold on dry lanes. The *only* super hard rubber ball available today that gives an extra long skid roll. The "purest" of all shells available in rubber balls. *AND Only* Roto-Grip makes it! The Roto-Star Silver Streak minimizes hooking problem. Roto-Star S-R model for right handers and Roto-Star S-L model for left hand bowlers.
