

THE POWER OF NITRO

The Purple Haze Is Here.

Ebonite® has once again bonded advanced chemistry and technology to add muscle to your game. The revolutionary Nitro Purple Haze delivers explosive performance on moderate to light oil lane conditions — skidding longer, hooking later and harder — providing the same power the Ebonite Nitro does on long heavy oil conditions.

The Nitro Purple Haze has undergone rigorous testing on a variety of lanes, passing the toughest tests of all — the PBA/LPBT players and amateurs.

Release the power of chemistry and technology in your game with the powerful performance of the Ebonite Nitro on long heavy oil conditions, and the even harder Nitro Purple Haze on medium-to-dry lanes.

These 2-piece balls have a specially-formulated urethane shell and a precisely placed Dynamic Core. The Nitro shell contains more than 11.5 pounds* of high performance urethane. Plus, the unique additive AJL51 delivers more surface contact with the lane than any other ball on the market. And the advanced compound HD106 creates a more powerful, harder-

hitting shell that absorbs impact better than the competition. The result is a combination of the most advanced balls to be released on today's lanes, whatever the conditions.

*11.5 pounds of urethane in 14, 15 and 16 pound balls. Balls also available in 12 pound.
