

RED ALERT!

CAUTION
DO NOT DRILL
BEYOND 3 INCHES

Featuring Track's patented POWERTECH™ CORE designed to generate the lowest radius of gyration attainable in any ball on the market today. The CRITICAL MASS CODE RED™ contains

the same dense inner core as available in the original CRITICAL MASS™ so it requires less hand action to achieve maximum revolutions. CRITICAL MASS CODE RED™ allows the bowler to enjoy the free spinning additional revolutions of the original CRITICAL MASS™ with an added twist. A maximum flare potential of 3-1/2 inches in a basic over the label drilling as opposed to substantial label shifts required in competitive products to achieve a similar flare pattern. This is achieved through the positioning and density variations of the high tech outer core. This combination

of a dynamically imbalanced outer core, the super dense POWERTECH™ inner core

and the already proven successful reactive VERSATHANE™ coverstock allows even the weakest of releases to achieve maximum roll and maximum hook potential.

The CRITICAL MASS CODE RED™ is by definition a low radius of gyration ball, meaning early roll. The big bonus comes in the backend of the lane where it counts. The CRITICAL MASS CODE RED™ is a backend reacting version of the original CRITICAL MASS™. A 3-1/2 inch flare potential means more traction because the ball continues to seek an ever-changing preferential axis thus rolling over a fresh oil free surface with each revolution. Simply put, more traction means more backend reaction! Just think, a ball so powerful in the backend yet so controllable in the front part of the lane. Get your hands on a CRITICAL MASS CODE RED™ and make your opponents see RED!
