

Danger Zone Pro: Proactive™ Doubles The Danger.

It took Throtbot.™ It took SuperCATS. It took exclusive Brunswick technology and more than a year of testing. But they're here — the two optimum Proactive formulations for today's bowlers. Our new factory-finishing method and materials pump up the Proactive performance, making the length longer and the hook stronger, right out of the box. The secret: a revolutionary microreplication abrasive capable of shaping jet engine parts to 1/10,000 of an inch. It's precision-engineering at its best. And it's deadly ... *for the competition.*

Danger Zone Pro™ HP Hook—MTX-1. It's Proactive. It's aggressive. With extra hook, extra power and an even arc right out of the box. Hooking like the Zone Pro Azure,™ but with a greater skid/snap arc, this is the Danger Zone Pro for the high-performance stroker needing a powerful hook. Best on medium to oily lanes, or where more mid-lane arc is needed.

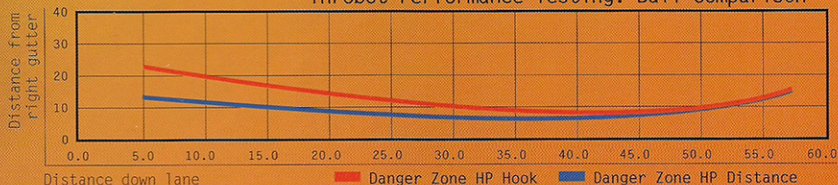

Coverstock: Proactive, MTX-1 / Surface Finish: dull microreplication abrasive / RG Max: 2.620 / RG Min: 2.560 / RG Diff: 0.060 / Average RG: 5.4 / Track Flare Potential: 10 / Hook Potential: 22-13 (dull/shiny) / Length: 3 / Backend: 11

Danger Zone Pro™ HP Distance—DTX-1. The first high-gloss Proactive ever, with the most skid/snap of any Zone Pro. It hooks huge and adds a ton of length, too. Power players will get more mid-lane arc and smoother breakpoints than with reactive coverstocks, making the HP Distance less susceptible to over/under reactions and more forgiving. Best on medium-dry to medium-oily lanes, or for broken down conditions.

Coverstock: Proactive, DTX-1 / Surface Finish: shiny microreplication abrasive / RG Max: 2.609 / RG Min: 2.564 / RG Diff: 0.045 / Average RG: 5.3 / Track Flare Potential: 8.9 / Hook Potential: 20-12 (dull/shiny) / Length: 4 / Backend: 11
