

DEFIANT EDGE

GUTS.

Featuring the same technological advancement found in the Defiant[™], the unique elliptical shape of the Paragon[™] core defines predictability of axis migration and allows you to perfectly match up your ball reaction to the condition at hand.

Paragon Core					
	16 lb	15 lb	14 lb	13 lb	12 lb
RG VALUE:	2.49	2.49	2.52	2.57	2.59
RG DIFFERENTIAL:	.052	.054	.053	.032	.029
PSA DIFFERENTIAL:	.017	.017	.016	.010	.008

GRIT.

The **MicroBite**[™] pearl reactive coverstock uses extremely small structured additives to help smooth the transitions while maintaining entry angle at the pocket. This helps you create better pin action while reducing oil sensitivity that can send your ball through the break point.

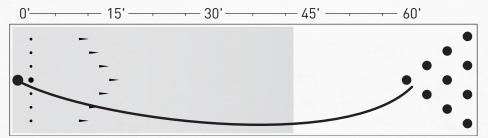

Factory Finish: 1500-grit Polished Flare Potential: 7+ Inches Coverstock: MicroBite Pearl Reactive Color: Red/Black/Electric Blue Hardness: 73-75 on D-Scale

GRIME.

The new Defiant Edge[™] is the ideal complement to the original Defiant, providing the perfect combination of skid-hook-roll even on medium-heavy oil. Be sure to keep your original Defiant on hand for those heavy oil situations.

Lane Condition – Medium/Heavy Oil

HOW TO KEEP YOUR NEW BALL REACTING STRONG

We strongly believe that preventative maintenance is the key to a cover's longevity.

WHY? The ball's ability to absorb lane oil into the pores helps to keep a dry ball surface in contact with the lane for more friction, creating added hook. Over a period of time, the bowling ball's performance will slowly deteriorate due to oil absorption and dirt buildup on the ball's surface.

In addition to using a clean and dry Storm microfiber towel in competition, we highly recommend that a bowling ball cleaner be used immediately afterward to further clean the ball's cover. If a ball is used and then put away without cleaning, the oil and dirt will have a greater chance to be absorbed deeper into the cover.

We hear time and time again from people who have lost hook in their equipment and swear they clean it on a regular basis. Only when the question is asked about when they clean their equipment does the real problem come to light; cleaning a ball just before use removes only a very fine layer while the deeper trapped oil and dirt still remain from your last session. Below is our recommended procedure to maintain your ball's performance:

- 1. Use a clean, dry Storm microfiber towel during competition
- 2. At the end of the session, use Storm Reacta Clean[™] and spray liberally over the entire surface of the ball
- 3. Rub your hands over the surface of the ball in a scrubbing motion for 15-20 seconds
- 4. Towel off the ball until dry

This process will assist the degreasing agent in the cleaner to draw oil and dirt out of the pores; the hand-action helps break down the oil and dirt, making it easier to be removed with a towel.

Ball Maintenance Checklist

WHEN	POLISHED BALLS	DULL BALLS		
Between Shots	Wipe with Storm Microfiber Towel	Wipe with Storm Microfiber Towel		
After Bowling	Clean with Storm Reacta Clean	Clean with Storm Reacta Clean		
Every 10 Games	Re-polish surface with Storm Reacta Shine™	Scuff surface with Abralon® pad to maintain original reaction		
Every 30 Games	Scuff surface with Abralon and re-polish with Storm Reacta Shine			
Every 60 Games	Ball is due for full resurface process
