

DIMENSION

...A NEW DIMENSION IN BOWLING

The recent focus of high performance bowling ball technology has been based on asymmetry and pushing the limits of physics. Storm Products® has turned the corner with the new Dimension™.

The Core: At the heart of the Dimension is the all-new, technologically advanced Continuum™ core. By inverting and rotating two identical asymmetric halves 90 degrees, and then merging them together, we have created equal mass displacement.

This translates into a tune-able break point found in asymmetry with the continuation and finish of symmetry. This high performance ball possesses tremendous versatility and performance to fit a variety of styles and conditions.

The Cover: Conceived by a company whose vision is relentless and developed for the bowling purist; Storm's R2X™ is clearly the new benchmark of traction performance in oil. The R2X™ coverstock is a product of continual evolution and refinement which occurs at the highest levels of research and development.

This highly durable, enhanced friction coverstock continues to deliver from the foul line through the pin deck on a variety of medium to heavy oil patterns with the out of the box 2000-grit Abralon™ finish. Minor surface adjustments, from polished to dull, will open up endless possibilities for the next Dimension in bowling.

Send your game into the next Dimension...
