

STORM NEWS FLASH!

- Strong Flare Potential • High Performance Hook • Quality Construction • Exceptional Value Pricing • Available at Pro-Shops and Bowling Centers everywhere!

THUNDER FLASH

After 2 years of research and development, Storm has achieved Thunderous results! Storm has combined the legendary Fe2 Thunder weight block with the all new U-2000 urethane coverstock to create THUNDER FLASH, a urethane ball aggressive enough to perform on today's high viscosity oil conditions, giving an even transition from the oil to the dry for exceptional hooking potential, superior performance and control. U-2000 urethane has been developed to create a strong arcing reaction and exceptional durability, characteristic of conventional urethane. U-2000 is the new generation urethane of the 21st century!

LIGHTNING FLASH

The LIGHTNING FLASH traits an inverted Horizontal Dual Density "Flash Bulb" weight block. The Lightning Flash weight block provides medium differential (.030) for 3 to 4 inches of track flare potential and a lower radius of gyration (2.529) for a smooth transition throughout the entire lane. Surrounding the Flash Bulb weight block is a pearlized Curelyon2™ coverstock for excellent skid potential through the drier heads. The Curelyon2™ coverstock still delivers sufficient energy for reliable recovery on the backend. No matter what the skill level, the Lightning Flash delivers excellent value and performance.
