

MORICH

Featuring a brand new coverstock formula specifically designed to raise the R_a value (the height and depth of the microscopic "spikes" and "pores" on the surface of the cover).

This "Extended R_a " value provides for increased contact between the ball and the lane surface.

When combined with a **SYSTEMATICALLY ADJUSTED** version of our EZ Rev Core System, LevRG RESPONSE produces the **MOST**

RESPONSIVE
and **MOST CONTINUOUS**
ball reaction the industry has ever seen!!!
