

BRING THE FIREPOWER

LIGHT OIL

The Covert Tank™ harnesses the strengths of traditional urethane, but offers far more versatility. It provides bowlers with control and the ability to play different parts of the lane than reactive resin, with better continuation and pin carry than traditional urethane. The Covert Tank™ is neither reactive resin nor urethane, but rather is new microcell polymer technology.

FRIXION™ MICROCELL POLYMER

The revolutionary Frixion™ Microcell Polymer cover absorbs oil at a fraction of the speed of reactive resin, but is still capable of absorbing oil at a very slow rate. This microscopic difference creates more continuation and better pin carry without sacrificing traction

TORX™ WEIGHT BLOCK

The Torx™ core features a higher differential to improve backend motion and limits oil redistribution. Traditional urethane balls tend to have lower track flare, struggle with pin carry, and push more oil down lane.

15# Diff: .051

Flare: 5"+

2000 GRIT LSS FINISH

A 2000 Grit LSS finish provides plenty of traction to create a smooth and controllable ball motion.
