Coverstock

The Red Alert Pro Edition introduces a rough buff version of the Plazma coverstock. The characteristic of strong traction on the lane shines through with Plazma coverstock. When combined with the Torsion Symmetric core this gives an unbeatable combination to attack medium oily to oily lane conditions and provide the unparalleled lane hugging traction and recovery Plazma coverstock is known for.

Core

Good coverstocks become great when paired with a core that accentuates their strengths. The Plazma coverstock with rough buff is paired with the Torsion Symmetric core. This core/coverstock combo makes the Red Alert Pro Edition rev up hard and hug the lane without hooking early. The medium RG asymmetric design of the core turns loose the power of the Plazma coverstock giving controllable mid-lane reaction, strong back-end performance with the pin-action you desire!

Utility - Red Alert Pro Edition

Out of the box: With its Factory Rough Buff Finish, the Red Alert Pro Edition is an ideal ball for medium to all but the oiliest lane conditions.

If your Red Alert Pro Edition goes too long: To get your Red Alert Pro Edition rolling sooner, dull the surface with an 800-grit abrasive (Abralon or Scotch-Brite Grey pad) to increase hooking action. To further increase hooking action, use a rougher abrasive to create an earlier reaction.

If your Red Alert Pro Edition hooks too early: Players with higher rev rates and/or players with slower ball speed may, on a drier condition, see the ball hook earlier than they would like. To increase the length, use a 2000-grit or higher abrasive. To further increase the length apply Brunswick Factory Finish High Gloss Polish.

Reaction Setup - Red Alert Pro Edition

The Red Alert Pro Edition can be drilled using the standard drilling techniques developed for two-piece balls. Please visit www.brunswickbowling.com/balls to view the drilling instructions for specific reaction characteristics and layout details.
