

The Big Berthas of Bowling!

Def Con Series

Roto Grip has combined the science of particle coverstocks with Roto Grip's exclusive state of the art "lock-and-load" weight block system to develop the highest differential, truest rolling balls available today. This combination achieves extreme flare potential to assure fresh coverstock exposure to the lane for undistorted ball reaction.

SD 73 Series

The internal construction of the Roto Grip SD73 creates dynamic energy, which combined with the Sure Grip™ coverstock, provides acceleration through the mid-lane and a backend reaction with unequalled power and control. The Pearl is cleaner through the fronts maintaining more energy for a stronger move on the backend.
