

The Heat is on...

...again.

It's back and in its pure, original form...the Heat! The ball that won more PBA national tournaments in 1997 than any other is one of the most revered and requested products that Track has ever produced. The innovative tri-core technology contains three components: the Rev Core to lower RGs and create a higher rev rate, the Flip Core for increased flare potential and backend transition, and the Balance Core designed to provide increased dynamics throughout the weight range.

The Heat uses the same Power Plus™ reactive resin with mica that enabled it to burn up the competition in the late '90s. The Heat is in its element in shorter- to medium-length oil patterns and where retained energy is paramount. Now in the affordable mid-price line-up of Track Internationals product line, the Heat isn't too hot for your budget to handle.

Pair the Heat with the Slash (for medium to heavier oil lane conditions), and make your competition sweat. Turn up the Heat.
