A detailed cutaway diagram of a bowling ball, showing its internal structure. The ball is positioned diagonally within a circular frame that has a marbled orange and red border. The internal components are shown in black and grey. A white line with circular markers points to various parts of the ball, each labeled with a technical term.

SUPER FREAK #0Y66-51-XXX

No more rumors or speculation... The Super Freak is here! The placement of another wing attachment on the opposing side of the Rev Plate provides the necessary combination of power and control to handle the new WOW II Ultra particle coverstock. WOW II Ultra is the most aggressive coverstock used in conjunction with the Morpheus Core Technology*. The Super Freak is undoubtedly the strongest ball in the Freak Line. Raw Hook... enough said!

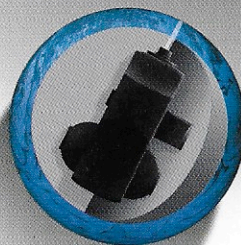

*Patent Pending

88888

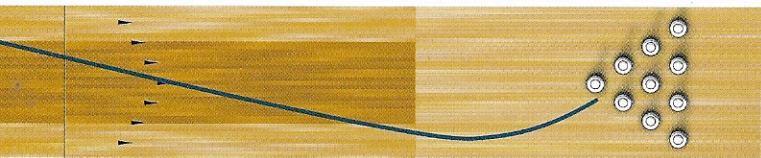

MUTANT #0Y34-51-XXX

Customers have expressed the need for a ball with a stronger mid-lane reaction. To create this reaction it was necessary to add another hemisphere attachment to the Rev Plate of the Freak. By altering the core profile and lightening the particle loading in the WOW 2 coverstock, we have created the Mutant. The Mutant can easily tackle the slickest of today's lane conditions while maintaining the versatility of the Freak line.

HIGH PERFORMANCE

- Asymmetric Core Designs
- Particle and Resin Coverstocks
- Dynamically Spun to Insure Performance

MORPHEUS TECHNOLOGY*

FREAK OUT #0W89-51-XXX

You want the big flip? We've got the big flip! Designed for lighter volume oil patterns or the high rev player, the Freak Out gives the bowler exceptional length with devastating backend. This reaction is created by the Freak Out's altered core profile and modified WOW II particle coverstock. The Freak Out allows the bowler to "open up" the backend of the lane without forcing them to move deeper. The Freak Out will be an excellent compliment to the Freak line when extra length and backend are desired.

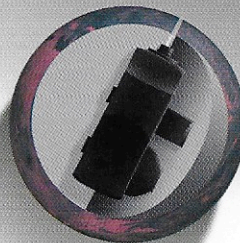

*Patent Pending

FREAK #0W75-51-XXX

Do you need a particle ball that hooks in oil, but recovers on the backend of the lane like a reactive ball? The Freak is exactly that. The Freak's Morpheus core design revs up harder when it encounters lane friction, creating a pronounced angular breakpoint. Our WOW II particle coverstock provides the necessary gripping power to handle the heaviest oil patterns. This combination gives the bowler all the hook they need in the right place... on the backend.

MORPHEUS TECHNOLOGY*

MID PRICE PLUS

- Particle and Resin Coverstocks
- Performance Proven Core Designs
- Vibrant Colors

FLARE RING TECHNOLOGY

THRASH #0Y69-51-XXX

— to defeat utterly; to vanquish.

No matter how you define it. It just strikes! The Thrash is the perfect balance of length and backend. The modified "Flare-Ring" core helps the Thrash navigate the front of the lane while the WOW II Pearl coverstock provides enough traction to give the bowler a strong arcing backend reaction. Straighter players will find the strong backend of the Thrash very useful while the high rev player can take advantage of its extra length. We didn't invent the art of striking... we just made it easier

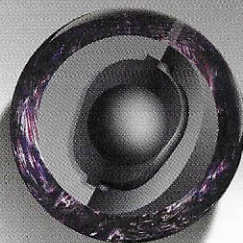

THREAT #0Y21-51-XXX

Since its introduction in 1997, we have received thousands of letters, phone calls and emails from customers wanting to find a Triton Heat. Due to the overwhelming demand for the Heat, Track has responded with the Threat. The Threat matches the core of the Triton Heat with the WOW Pearl particle coverstock. WOW Pearl will make the Threat much more versatile on today's slicker lane oils. The Threat is a devastating combination of new and proven technology that is sure to take your game to the next level.

TRI-CORE TECHNOLOGY

MID PRICE

- Resin Coverstocks
- Performance Proven Core Designs
- Vibrant Colors

MULTI-DENSITY TECHNOLOGY

CRUNCH #0Y46-51-XXX

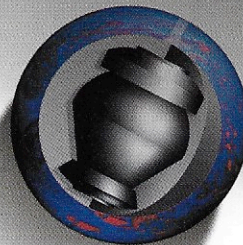

Do you feel the need to put a "Crunch" on your competition? If so, check out the Crunch. At the heart of the Crunch you will find a multi-density core featuring a dense Rev Sphere. The Rev Sphere helps the ball rev harder in the mid-lane providing the bowler with the ability to control the breakpoint without losing backend. The Power Plus resin coverstock will provide the traction necessary to handle today's slicker lane oils. Don't make your opponent squeeze...Crunch 'em!

REVMASER #0Y08-51-XXX

Check out Track's latest addition to the mid-price line "The Hex-RevMaster." The super low RG of the RevMaster allows the bowler to increase their rev rate while its high differential enhances the overall hook ability! Strap this engine inside the aggressive Blue/Orange Power Plus reactive coverstock and wheel the lane against the competition!

CLEANERS:

CLEAN 'N SMOOTH 8 oz #OCSM-89-160
32 oz #OCSM-32-160

Clean 'N Smooth is designed to restore the 1500 smooth finish to your particle or reactive resin ball. This mild abrasive will remove small scratches and re-activate particle coverstocks and the addition of a cleaning agent will tackify the ball to give you that out of the box reaction.

CLEAN 'N SHEEN 32 oz #OCS-329-160

This mildly abrasive product will remove oil and restore a ball's factory dull finish. Clean 'N Sheen is also used as a base coat for all Track Magic products. Clean 'N Sheen is most effective when used on a ball spinner.

REACTION PLUS 8 oz #ORP-899-160
32 oz #ORP-329-160

A great product for cleaning and retaining tackiness in one step. This cleaner will not alter the surface of the ball (Polished balls remain polished and dull balls remain dull). Reaction Plus is equally effective when applied by hand or on the ball spinner.

CLEAN 'N DULL 8 oz #OCD-899-160
32 oz #OCD-329-160

This is our most aggressive cleaner/tackifier. This gel will remove oil and dirt on both reactive and particle technology bowling balls. Clean 'N Dull is legal for ABC/WIBC competition.

POLISHES:

MAGIC SHINE 8 oz #OMS-899-160
32 oz #OMS-329-160

When increased length and a strong backend is needed, Magic Shine will do the job. This polish and tackifier will significantly increase the backend reaction on particle and reactive resin balls.

DELAYED REACTION

Delayed Reaction is formulated to give bowlers extra length and controlled backend on today's high friction bowling balls. Delayed Reaction will work well for bowlers needing extra length due to slow ball speeds, higher rev rates, drier lane conditions, or any combination of these factors.

CLEAN 'N POLISH 8 oz #OCP-899-160
32 oz #OCP-329-160

This polish is specially formulated to increase length on medium to dry conditions, whether you apply it manually or with a ball spinner. The high-gloss finish will bring raves. Get the most out of it by treating your ball with Clean 'N Sheen first. Well worth the extra effort.

BAGS

DOUBLE TOTE

A necessity for all tournament bowlers, our tote features an extra large shoe/accessory pocket on one side, a padded base, and an embroidered Track logo. The 600D material is rugged enough to handle all conditions.

Black/Blue #0280-48-160

888⁸⁸

ECONO-LINE DOUBLE ROLLERS

You want quality, but you don't want to pay too much. Who Doesn't? Our Econo Double Rollers have sturdy bases with square pull handles and a large wheel base for stability. A full-length shoe pocket and one large side pocket provide plenty of space for your gear.

PRO-LINE TRIPLE ROLLERS

With three Track balls in this bag you should have a permit to carry concealed weapons. The Pro-Line Triple has all of the features of its little brother the Pro-Line Double as well as an extra large detachable accessory case. You may not be a professional, but at least you can look like one.

PRO-LINE DOUBLE ROLLER

Extra large wheels, wider wheelbase, three large pockets, and a locking pull handle. A serious bag for a serious bowler. You will let 'em all know you are ready for action when you wheel this bag into the bowling center.

Black/Graphite #0J06-02-130

888⁸⁸

*Replacement parts available for all roller bags.
