

**Part Number**

60-104255-93X

**Coverstock**

SS Extreme Reactive

Color: Blue Pearl / Silver Pearl

Hardness: 76-78

**Factory Finish**

High Gloss Polish

**Core Dynamics**

RG Max: 2.580

RG Min: 2.536

RG Diff: 0.044

Average RG: 4.6

**Performance**

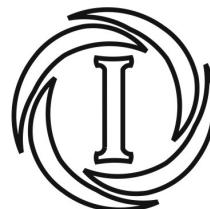

Hook Potential: 105

Length: 110

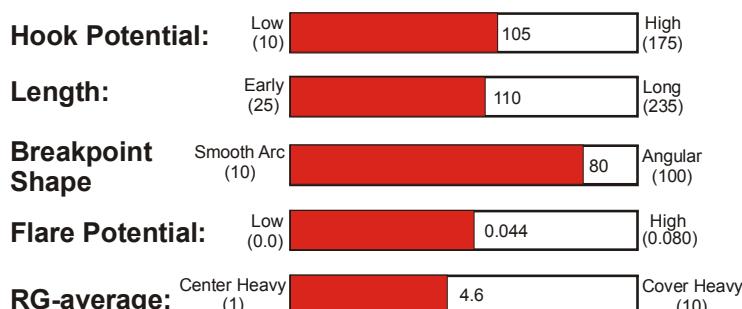

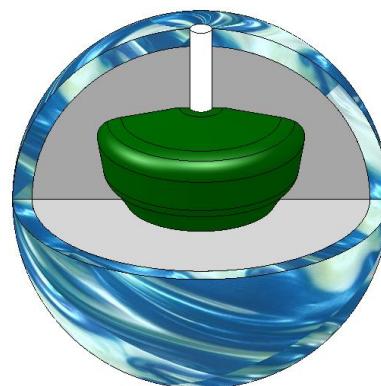

Typical Breakpoint Shape:80

**Available Weights**

11-16 Pounds

**BIONIC  
ZONE  
SS EXTREME**

**Reaction Characteristics – Bionic Zone's**

Brunswick's International Series has been developed specifically for Asian markets using core and coverstock systems that provide Asian bowlers with a range of equipment that matches up to typical Asian lane conditions. The looks of International Series balls are also adapted to Asian tastes making the International Series completely customized for Asian bowlers. Available only through International Distributors..

The **Bionic Zone 1 & 2** utilize both symmetric & asymmetric core technologies and reactive & particle coverstock technologies to create higher RG versions of two of the most popular International Zone ball reactions. This pair of complementary ball reactions will allow bowlers to match-up to lane conditions ranging from medium-dry to oily.

The **Bionic Zone 1** is a higher RG version of the Smart Zone 1. The **Bionic Zone 1** uses the Smart Zone 1's SS Extreme Reactive coverstock but combines it with a higher RG inverted bell shaped core to save more hooking action for the back-ends. This core/coverstock combination creates a skid/snap reaction that matches up on medium-dry to medium-oily lane conditions, shorter patterns or broken down lane conditions. Bowlers with slower ball speeds or any bowler who has problems with the ball hooking early should appreciate the ball reaction of the **Bionic Zone 1**.

The **Bionic Zone 2** uses a medium RG asymmetrical core system combined with a PowerKoil22 based, solid color low load particle coverstock. This core/coverstock combination creates a large hook potential, even arcing reaction that matches up on medium to oily lane conditions and longer patterns. Bowlers with faster ball speeds or any bowler who has problems with the ball going too long before hooking should appreciate the ball reaction of the **Bionic Zone 2**.

**Utility – Bionic Zone 1**

•**Out of the Box:** With its high gloss surface the **Bionic Zone 1** matches up well on medium-oily to medium-dry lane conditions.

•**When dulled:** The **Bionic Zone 1**'s hooking action will increase and its arc will become more even, creating a better match-up for oily lane conditions and for smoothing over/under reactions seen on wet/dry lane conditions.
