

Specifications - Power Groove™ Proactive – Black Sparkle

Part Number

60-103708-93x

Covertstock

Proactive - Low Load

Color: Black Sparkle

Hardness: 76-78

Factory Finish

400-grit wet sand

Core Dynamics

RG Max: 2.708

RG Min: 2.667

RG Diff: 0.041

RG Avg: 8.2

Performance

Hook Potential: 115

Length: 70

Breakpoint Shape: 60

Available Weights

10-16 Pounds

(10-11 use a spherical offset core, no riser pin)

Reaction Characteristics

Plastic slips. The Groove grips. And grip is exactly what you need to improve your game. When you're ready to step up from plastic, get in the Groove.

Want more hook? Move all the way up to Proactive covertstock technology. Compared to Reactive, Proactive covertstock technology increases hooking action in the oil by adding texturizing particles that create a tread-like surface that tractions through heavier amounts of oil, increasing friction and hooking action. Like Reactive covertstocks, Proactive covertstocks can be sanded or shined to create large differences in hook potential. Proactive covertstocks also respond less violently to dry lane surfaces than Reactive covertstocks, creating a smoother, more arcing ball reaction with more control.

Coverstock: The Black Sparkle features Brunswick's popular Low-Load Proactive covertstock. First used on the Navy Quantum, this Proactive covertstock is the strongest ever used on a Groove class ball.

Core: The Black Sparkle introduces Brunswick's new DISC (Differential Increasing Side Cylinders) core technology which provides:

- The largest track flare potential of any ball in its class
- Consistent track flare potentials at all weights from 12-16 pounds
- Larger, more consistent pin-out distances at all weights from 12-16 pounds
- A more driller friendly design. The precise geometric placement of high density side cylinders maximizes the increase in Track Flare Potential while maintaining perfect dynamic symmetry for easy drilling.

Reaction Setup

The Power Groove Black Sparkle can be drilled using the standard drilling techniques developed for two-piece balls, see the included drilling instructions for reaction characteristics and layout details.

The Power Groove Black Sparkle is finished with a dull 400-grit surface finish which increases its hooking action in the oil. Dull surface finishes can sometimes hook too early resulting in less back reaction and hitting power. To increase length, polish the surface with a rubbing compound. For the most skid/snap reaction use a finishing compound in addition to the rubbing compound.
