Typical Backend: 11

Average RG: 4.0

Track Flare Potential: 10

Zone Pro is a higher RG Ball than the Jade Quantum For additional length.

AUGUST 1998 ProActive Zone

the Jade Quantum, Jade Tour and the Zone Pro use the Axiom™ ProActive Urethane™ coverstock. ProActive urethane produces a higher hook potential than reactive resin with a smooth controllable urethane-like arc. Axiom™ delivers the traction effect at the breakpoint, making ProActive balls less "squirry or skiddish" at the breakpoint for better control offering bowlers a high degree of repeatability.
