

# Information Sheet

## Purple Quantum

### Specifications

3-component design with a  
2-part compound core  
**ArrowD** Highly Reactive Cover Stock  
Polished  
Hook Potential: 18.5 - 10.5(dull/shiny)  
Typical Length: 2.5  
Typical Backend: 10+  
Center/Cover Heavy: 2.7  
Track Flare Potential: 9.2

### Reaction Characteristics

BTV engineers have combined the core system used in the Sage Tour Quantum with the more aggressive **ArrowD** coverstock material developed by Bayer Corp. to create the all new **Purple Quantum**. This core/cover combination generates a ball that has length characteristics in between the Sage and Raven Quantums, while maintaining a very strong hooking action at the breakpoint.

**Purple Quantum's** core design combined with the reaction characteristics of **ArrowD** enables the ball to be aggressive over the entire length of the lane for optimum reaction on medium to heavily oiled lanes.

### Drilling Information

All weights of the **Purple Quantum** can be drilled using the techniques developed for two-piece balls. See Brunswick's "Seven Popular Layouts" for detailed drilling information.
