PRO PERFORMANCE

STRIKE LINES

NEXXUS™ *f*(P+S) — NEW

The Addaptive *f*(P+S) Pearl coverstock is Brunswick's hottest innovation in performance enhancing Addaptive chemistry. *f*(P+S) describes our newest formula that combines our new (P)rojection and our new (S)nap additives together to create our most aggressive pearl coverstock to date. The Projection additive easily pushes the super aggressive coverstock down lane where the Snap additive connects with the lane for an extraordinary backend hook motion.

60-105471

NEXUS ARROWHEAD CORE

The Nexus Arrowhead core features a single density squared-off elliptical inner core that is dynamically designed to stay on line, enhancing downlane projection. This long and sleek core helps the Nexxus *f*(P+S) preserve revs and ball speed into the backend of the lane which results in increased pin action and higher scores.

NEXXUS™ *f*(P+R)

The new (P)rojection additive easily pushes the super aggressive coverstock down lane where the new (R)ecovery additive connects with the lane for an extraordinary backend hook motion.

60-105440

NEXUS ROTOR CORE

This core integrates a center stabilizing capsule that revs quickly to control the mid-lane. As the axis migrates and the core lays down, the two vertical flip claws take over maintaining the rev rate for a strong continuation through the backend and powerful drive through the pins.

NEXUS™ *f*(P+F)

The *f*(P+F) describes our formula that combines our new (P)rojection and our new (F)riktion additives together to create a seriously aggressive coverstock.

60-105421

NEXUS ARROWHEAD CORE

This core features a single density squared-off elliptical inner core that is dynamically designed to stay on line, enhancing downlane projection. It helps preserve revs and ball speed into the backend of the lane which results in increased pin action and higher scores.

NEXUS™ *f*(P)

The *f*(P) describes our formula that combines our new (P)rojection additive with an aggressive reactive coverstock to skid easily down the lane, saving axis rotation for the backend that results in higher entry angles into the pocket and improved ball motion through the pins.

HIGH PERFORMANCE

STRIKE LINES

C•(SYSTEM)™ MAXXED-OUT — NEW

CFT maxx-ed-out Solid is our latest innovation in Chemical Friction Technology. The CFT maxx-ed-out solid coverstock maximizes the friction additives to strengthen its grip in the mid-lane and backend for maximum control. The CFT maxx-ed-out solid coverstock still provides enhanced projection down the lane saving axis rotation for more energy on the backend and through the pins.

60-105469

ULTRA LOW DUAL FLIP I-BLOCK SYMMETRIC CORE

This core incorporates a top and bottom flip block over a centered mass. The centered mass creates stability while the dual flip blocks keep the core revving to the backend all the way through the pins for improved pin action.

C•(SYSTEM)™ VERSA-MAX

By using less mechanical friction to produce hook, the CFT versa-max solid coverstock provides enhanced projection down the lane while saving axis rotation for more energy on the backend and through the pins.

60-105442

DUAL FLIP I-BLOCK SYMMETRIC CORE

This core incorporates a top and bottom flip block over a centered mass. The dual flip blocks keep the core revving to the backend for improved pin action.

AFFORDABLE PERFORMANCE

STRIKE LINES

KARMA™ URETHANE — NEW

The Karma Navy Solid uses a retro Urethane coverstock. Designed for a smooth predictable ball motion the Karma Urethane is designed for lighter amounts of oil and a more "down the boards" line to the pocket.

60-105468

MEDIUM RG PERFORMANCE CORE

The Karma Urethane incorporates a familiar light bulb shape Medium RG Performance core that provides easy length through the heads, mid-lane stability while maintaining axis rotation for a strong continuous backend motion.

KARMA™ PURPLE/PINK PEARL

The pearlized version of Activator Plus coverstock used on the Karma Purple/Pink Pearl is factory-finished with High Gloss Polish to create extra length on lighter oil conditions.

60-105446

MEDIUM RG PERFORMANCE CORE

The Karma Black / Blue Solid incorporates a familiar light bulb shape Medium RG Performance core that provides easy length through the heads, mid-lane stability while maintaining axis rotation for a strong continuous backend motion.

KARMA™ BLACK/BLUE SOLID

With its High Gloss box finish, the Karma Black / Blue Solid will provide good length through the heads, a medium response to friction in the mid lane with a smooth controllable backend. The Karma Black / Blue Solid is great ball for rev dominant and slower ball speed players on medium to light oil conditions.

60-105337

MEDIUM RG PERFORMANCE CORE

Incorporating a familiar light bulb shape this core provides easy length through the heads, mid-lane stability while maintaining axis rotation for a strong continuous backend motion.

SLINGSHOT® — NEW COLOR

The Slingshot features the popular Brunswick PowrKoil 17™ Reactive coverstock. PowrKoil 17 is a mild reactive coverstock that will create length with a medium response to friction on dry to medium-dry lane conditions. The Slingshot is available in a variety of bright pearlized colors to match any bowler's style.

2-PIECE SHAPED CORE

The first ball in its class with a two-piece shaped dynamic core that offers multiple drilling options and stronger hitting power compared to traditional three-piece pancake weight-block cores available at this price point.

Hook: Rated on an open-ended scale, hook describes the relative "out of the box" hook potentials of Brunswick bowling balls. Balls with higher numbers will tend to hook more. Balls with lower numbers will tend to hook less. Bowling balls do not hook by themselves but respond to the forces a bowler applies at release. Hook numbers are not a numerical measurement of hooking action. Don't use the difference in hook numbers to try to predict the exact difference in the total amount of hook between two balls. A value of 100 is approximately equal to a strong Reactive coverstock - "Danger Zone type" ball reaction. Balls with hook numbers greater than 100, typically Particle coverstocks, will tend to hook more than balls with strong Reactive coverstocks. Balls with hook numbers less than 100 will tend to hook less than balls with strong Reactive coverstocks.

Length: Rated on an open-ended scale, length describes the relative "out of the box" length of Brunswick bowling balls. Balls with higher numbers will tend to go longer before starting to change direction. Balls with lower numbers will begin to change direction earlier. Length numbers are not a numerical measurement of length. Don't use the difference in length numbers to try to predict the exact distance between breakpoints. A value of 100 is approximately equal to a strong Reactive coverstock - "Danger Zone type" length. Balls with numbers greater than 100 will tend to go longer than a strong Reactive ball. Balls with numbers less than 100, typically Particle coverstocks, will tend to go earlier than a strong Reactive ball.

Typical Breakpoint Shape: Rated on an open-ended scale, Typical Breakpoint Shape describes the relative "out of the box" breakpoint shapes when the balls are used on lane conditions that are appropriate for that ball. For example, on medium amounts of oil, Reactive coverstock balls will tend to have a sharper breakpoint than Particle balls. If the amount of oil is significantly increased, the Reactive ball may not break on the backend at all and the Particle ball may have the sharper breakpoint. The breakpoint numbers don't guarantee a specific breakpoint shape, but indicate the typical breakpoint shape when used on appropriate lane conditions.

Siaair Micro Finishing Pads

Siaair is a micro finish abrasive pad with three components, one perfect result. Siaair combines the revolutionary velvet net-backed abrasive with a pressure-equalizing, special foam cushioning and the proven Siafast fastening system. The combination is a three-dimensional abrasive for the highest quality requirements in finishing.

Benefits Include:

- Longest lasting micro pad in the industry
- Consistent finish throughout life of pad
- Minimum clogging
- Low scratch depth
- Waterproof and washable
- Available in the following grits - 240, 360, 500, 800, 1000, 1500, 2000 & 4000
