

## Technical Specifications

### Revolution Defiance ECX

Part Number: **60-103529-93x**

Color: **Teal Blue Pearl**

Coverstock: **C60R-XL**

**Extra Length Reactive**

RG Max: **2.620**

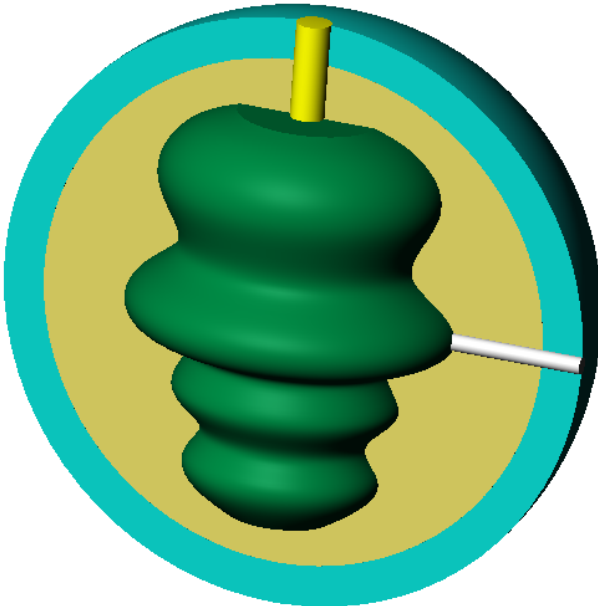

RG Intermediate: **2.613**

RG Min: **2.585**

RG Diff: **0.036**

Asymmetric Diff: **0.007**

Weights: **12 - 16 lbs.**

## Performance Characteristics

The Defiance ECX features a second generation elliptical asymmetric weight block that is designed for versatile layouts and distinct reactions when compared to traditional symmetric cores. Compared to the original Rebel ECX, the Defiance core features a higher overall RG, combined with lower overall and asymmetric differentials.

The Defiance ECX also uses the new C60R-XL Extra Length Reactive cover stock that provides increased length even as the heads dry out and makes a stronger, more continuous change in direction from the breakpoint to the pins compared to earlier reactive cover stocks.

This core and cover stock combination provides superior reactions on medium to drier lane conditions for all bowlers.

## Layout Techniques

Layout strategies are unique for the Defiance ECX in that a variety of reactions can be gained from the same core axis angle with different twists of the elliptical core.

Basic drilling instructions are available in this package for the Defiance ECX.

Advanced instructions are available on the Revolution Bowling web site at [www.revolutionbowling.com](http://www.revolutionbowling.com)

**\*It is important to note the engraved ellipse is a drilling aid that marks the general orientation of the core inside the ball and is only approximately centered around the riser pin.**
