

EBOONITE[®]

1994-95 PRO LINE PRODUCTS

NITRO/R²

Ebonite's newest high-performance ball, the Nitro/R², enhances the reaction in our Reactive Resin™ veneer. The internal integrity of the core is no longer static in design, but transfunctional through the entire 10 through 16 pounds weight range. The core makes use of mass displacement and distribution to effect a positive spin bias through the core center line. This quantum leap in ball design, which utilizes computer-enhanced designs and engineering, emphasizes total ball dynamics and continues to focus on optimum ball roll and reaction, which maximizes performance.

NITRO/R²
10, 11, 12, 13, 14, 15, 16 lbs.
029744 927

■ Medium Oil

High performance is now in the hands of all bowlers without regard to their physical stature. By carefully balancing the distribution of mass with respect to the axis of spin, the newly designed Nitro/R² is able to transmute energy from the integration of centrifugal and gravitational forces to create what we call a torque conversion through the entire weight range.

This increase in vector transitions for the lower weights was measured at ABC/WIBC research headquarters using a computer-assisted ball tracking system that measured as much as a 33% increase in the translatory movement of the ball to the pocket versus the higher weight balls.

NITRO/R

The NITRO/R Reactive Resin™ urethane two-piece ball delivers! An exclusive Dynamic Core gives the NITRO/R a precise area of concentrated weight. The Reactive Resin™ shell has 11 lbs.* of urethane formulated with a unique additive which allows a more positive gripping action due to a greater coefficient of friction. In simple terms, the NITRO/R skids longer, hooks later and harder, and delivers a consistent angle to the pocket.

**11 lbs. of urethane in the finished 14, 15 and 16 pound balls.*

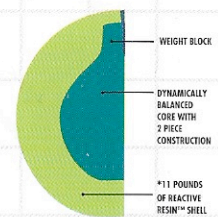

Walter Ray Williams, Jr.

■ Medium Oil

NITRO

Nitro two-piece balls have a specially-formulated urethane shell and a precisely placed Dynamic Core. The Nitro shell contains more than 11.5 pounds of high performance urethane in 14, 15 and 16 pound balls. Plus, the unique additive AJL51 delivers more surface contact with the lane than any other ball on the market. And the advanced compound HD106 creates a more powerful, harder-hitting shell that absorbs impact better than the competition.

The Nitro Blue is the most successful performance ball in Ebonite's history. The exclusive Dynamic Core gives the Nitro a precise area of concentrated weight so it skids longer, hooks later and harder.

The revolutionary Nitro Purple Haze delivers explosive performance on moderate to light oil lane conditions — skidding longer, hooking later and harder — providing the same power the Ebonite Nitro does on long heavy oil conditions.

CRUSH/R

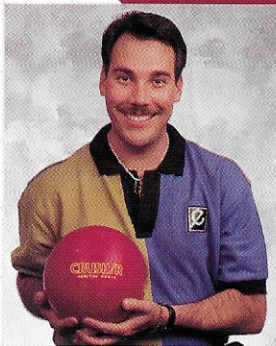

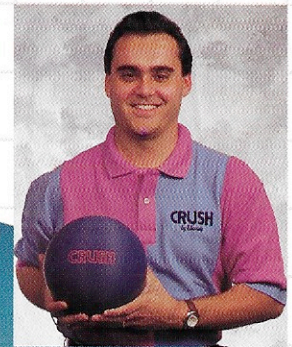

The CRUSH/R with Reactive Resin™ has a modified strata core four-piece construction for unbelievable control. The lightly sanded urethane shell (76 hardness) has a profound hook on the backend. It skids through oil to conserve the kinetic energy for greater hitting power. The softer urethane inner shell (67 hardness) absorbs shock to keep pins low and explosive. Polish the CRUSH/R for dry oil conditions and get the same explosive results.

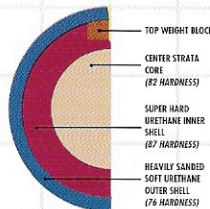

CRUSH/R
12, 13, 14, 15, 16 lbs.

CRUSH
12, 13, 14, 15, 16 lbs.
029744 963

■ Heavy Oil

CRUSH

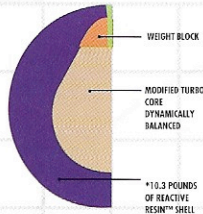

The CRUSH strata core four-piece construction is the most technically advanced breakthrough since the development of urethane. The 76 hardness urethane shell, heavily sanded for increased traction, rolls and hooks harder than any ball on the market in a heavy oil environment. The super hard urethane inner shell has an 87 hardness, delivering more energy into the pins for explosive results. The CRUSH can be polished to skid longer on light oil, roll and hook into the pocket for the same explosive results.

4.5 pound outer shell, 7.0 pound inner shell, 11.5 pounds of urethane in the finished 14, 15 and 16 pound balls

TURBO X

The Turbo X with Reactive Resin™ has a modified Turbo core, dynamically balanced to increase its kinetic energy for greater hitting power. The pins stay low and explosive. The Reactive Resin™ formula with RRT31 additive enhances the polymer morphology, allowing the urethane a greater gripping action due to a greater coefficient of friction that delivers extreme backend hooking characteristics.

*10.3 pounds of urethane in the finished 14, 15 and 16 pound balls.

TURBO

Turbo Power

The Turbo's powerful two-piece construction gives you a highly concentrated core with an extra thick shell — nearly two inches of urethane. This means a more consistent roll and greater impact, keeping pins lower for improved carry-through. The bold graphic design, vibrant colors and a great price complete this power package.

Accessories

All the gripping power of the Ultra-Gripper™ without being sticky. Comfortable elastic fabric with heat treated gripping compound coating. The hook and loop wrist strap allows easy removal. Available in small, medium, large and extra-large.

React/R Glove

Great grip and "It fits like a glove!"

850

Power-Gripper™

The Power-Gripper™ glove combines the control and performance of the Ultra-Gripper™ with a padded steel backhand support system and three inch hook and loop wrist band. Available in small, medium, medium-large, large and extra-large.

950

Ultra-Gripper™

Designed for performance and constructed of soft, cabretta leather, it is treated with a unique tackifying process to improve grip. Available in right or left hand; petite, small, medium, large or extra-large.

900H

Reactive Resin™ Ball Cleaning System

Use Ebonite's Reactive Resin™ Cleaner to remove oil, dirt and residue from CRUSH/R, Turbo X or other reactive balls. Step 1 cleans and Step 2 restores the tackiness of your reactive ball.

104 Blister Card (2 - 1 oz. bottles)
105 Display Box (2 - 4 oz. bottles)

Ultra-Slide

Get the slide of new shoes with Ultra-Slide. Eliminates shoe sticking and great for damp conditions – perfect for synthetic lanes.

NEW 314 Display Card of 24
316 Display Box of 48

Ultra-Grip™ Tape

Smooth black and textured white tape inserts for better grip and smooth release. Card contains 15 pieces of each.

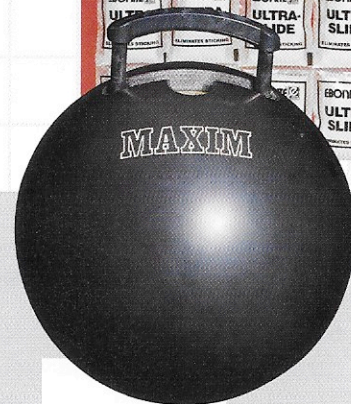

015 Blister Card

Handle Grip Bowling Ball

This specially designed Handle Grip ball has a spring-loaded handle that retracts flush to the ball, allowing for true roll. Available in: Black Urethane - 6, 8, 10, 11, 12, 13, 14, 15, 16 lbs. (Order by weight)

One Year Guarantee against defects in materials or workmanship.

Woven Towel

The Ebonite logo is woven into the dense, 100% cotton terry loops. Thick, soft and super absorbent.

207

Ultra-Fit Ball Workout Tool

Precision fine tune the finger and thumb holes in your ball. Aluminum handle and carbide blades for long life. Replacement blades available.

NITRO/R²
REACTIVE RESIN

NITRO/R2

The introduction of the Nitro/R2 is a continuation of our quest for excellence. The core makes use of specifics in mass displacement and distribution to effect a positive spin bias through the core center line. A secondary spin axis of lesser influence has been created, which is symmetric and perpendicular to the core center line, creating controlled diametric opposition to the principal spin axis. This quantum leap in ball design, with an emphasis on total ball dynamics, continues to focus on maximizing performance through innovative changes evolved through computer-enhanced designs and engineering.

CRUSH/R

The CRUSH/R with Reactive Resin™ has a modified strata core four-piece construction for unbelievable control. The softer urethane inner shell (67 hardness) absorbs shock to keep pins low and explosive.

CRUSH

The CRUSH strata core four-piece construction is the most technically advanced breakthrough since the development of urethane. The super hard urethane inner shell has an 87 hardness, delivering more energy into the pins for explosive results.

TURBO X

The Turbo X with Reactive Resin™ has a modified Turbo core, dynamically balanced to increase its kinetic energy for greater hitting power. The Reactive Resin™ formula with RRT31 additive enhances the polymer morphology, allowing the urethane a greater gripping action due to a greater coefficient of friction that delivers extreme backend hooking characteristics.
