

Technical Specifications

Part Number: **60-104481-93x**

Color: **Blue/Black**

Coverstock: **PowrKoil 22**

RG Max: **2.562**

RG Min: **2.518**

RG Diff: **0.044**

Performance Characteristics

The Revolution Rev-Cyclone has been created for international bowlers on the lane conditions they typically encounter. The Rev-Cyclone features an high density inner core that creates a medium-high RG ball with a medium differential RG. Combined with the PowrKoil22 reactive coverstock, the Rev-Cyclone attacks the mid-lane and delivers strong back-end hooking action. This core and coverstock combination work together to create a ball that is very versatile and can be used on medium-dry to medium-oily lane conditions to provide superior reactions.

Layout Techniques

The Rev-Cyclone can be drilled like other standard two-piece ball designs. With an RG Differential of 0.044 this ball will create a medium amount of track flare for most bowlers. Bowlers with average physical games can use stronger leverage type layouts to get good reaction on medium-oily conditions and label type layouts on medium-dry lanes. Bowlers with stronger physical games can also use leverage layouts on oilier conditions and label type layouts with the pin above the fingers to get the ball down the lane while maintaining a strong backend reaction on more medium lane conditions.
