

Technical Specifications

Part Number: **60-104408-93x**

Color: **Purple/Silver**

Coverstock: **PowrKoil 18**

RG Max: **2.529**

RG Min: **2.493**

RG Diff: **0.036**

Performance Characteristics

The Revolution Rev-Sword has been created for international bowlers on the lane conditions they typically encounter. The Rev-Sword features a high density inner core that creates a medium-low RG ball with a medium-low differential RG that allows the ball to roll heavy through the mid-lane but still be aggressive in the back-end. The PowrKoil 18 coverstock combined with the medium-low differential core combination used on the Rev-Sword helps the ball stay on line through the front part of the lane and then respond aggressively in the mid-lane and back-end. This core and coverstock combination work together to create a ball that rolls strong over the entire length of the lane while still being very versatile and can be used on dry to medium-oily lane conditions to provide superior reactions.

Layout Techniques

The Rev-Sword can be drilled like other standard two-piece ball designs. With an RG Differential of 0.036 this ball will create a medium amount of track flare for most bowlers. Bowlers with average physical games can use stronger leverage type layouts to get good reaction on oilier conditions and label type layouts on drier lanes. Bowlers with stronger physical games can also use leverage layouts on oilier conditions and label type layouts with the pin above the fingers to get the ball down the lane while maintaining a strong backend reaction on more medium lane conditions.
