Our goal is and always has been to push the boundaries of technology to greater enhance the performance of our bowling balls in order to give bowlers better scoring results. We proudly introduce the next leap in technological advancement, and it comes in the form of Nanotechnology!

When viewing the all new **NRG™ (Nano Reactive Genesis)** coverstock under the 200x magnification, you can see the micro-dynamic enhancements of the surface; the topography clearly illustrates the aggressive peaks (Ra), deep valleys, and grittier sub-surface structures. As these peaks and valleys experience normal wear, brand new Nano-enhanced peaks are revealed exposing jagged and previously unexposed sub-structure, which in turn produces newly formed friction enhancing peaks. This type of technology requires less maintenance to generate the same, heightened level of Ra equating to more friction for the bowler.

So what does all this techno mumbo jumbo do for you? If you take the guts from the original Virtual Gravity™ (**Shape-Lock™ HD** weight block) and wrap it with the grit of the **NRG** coverstock, you have a bowling ball that eats oil, rips the corner, and kills the pocket!

**The Virtual Gravity Nano welcomes you to state-of-the-art technology.**

"I bowled four games to see what I could do with the Virtual Gravity Nano, 248 - 244 - 279 - 289. Spinners, knucklers, rocket throwers, or crankers that like to play fifth arrow on fresh - will love this ball! It always starts up before the end of the pattern which increases carry potential exponentially! Throw the ball and every five or six frames move in even if you don't think you should! This ball will be a homerun!"

**Don Hogue**

North Star Pro Shop - Akron, Ohio

"I tested the Virtual Gravity Nano on a variety of conditions. The ball had continual motion through-out the lane, and it was able to hook back from multiple angles. On a fresh 40 ft. house pattern I could play from inside and the ball made a distinct hook motion in the mid lane and continued through the pins. As I moved further outside the ball still got down the lane and didn't over react. When I played on a longer Kegel pattern I still got great mid lane motion and continuation. Bottom line, for any of your customers looking for a versatile high performance ball, they will be extremely excited to throw the Virtual Gravity Nano!"

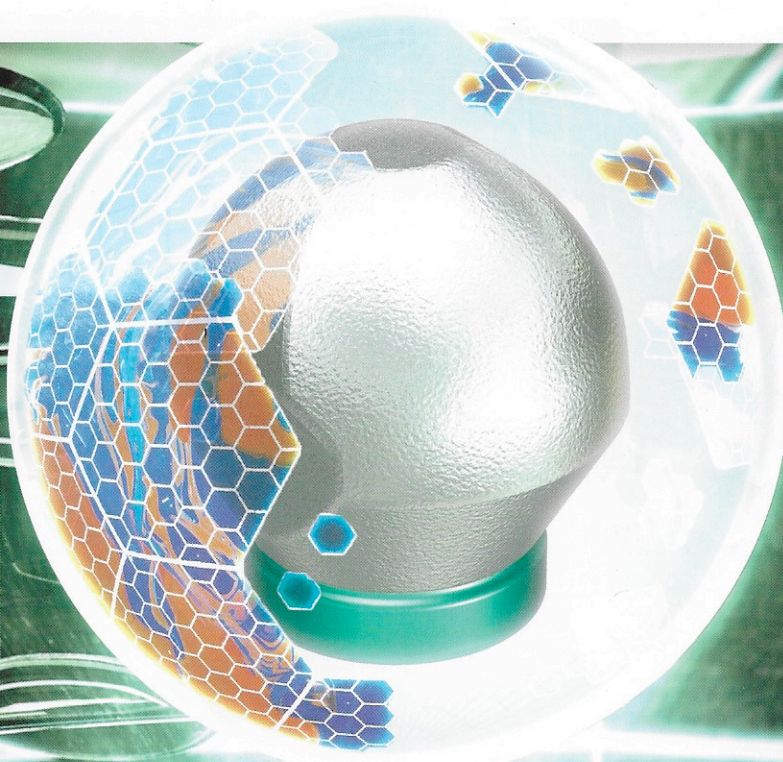

**Billy Myers Jr.**

The Professional Approach - Lakewood, California

"The Virtual Gravity Nano was quite a surprise! Knowing now how strong the Nano is, I wish I would have gone with a different layout. Never the less, the NRG coverstock is one of the most durable cover stocks I've seen in quite some time. The versatility is a great feature as well; shined or polished this ball is going to be great!"
