

THE EDGE™

COVERSTOCK

Honor Roll Solid reactive coverstock is Brunswick's latest cutting edge development based off our performance enhancing additive chemistry technology. Honor Roll Solid coverstock offers the most aggressive coverstock to date for a Brunswick ball. This aggressive coverstock produces easy length through the heads with unsurpassed traction in the mid-lane and backend to achieve ultimate hook.

CORE

The **Medium RG symmetrical** core features a tall and curvilinear design to provide maximum energy retention. The new core shape produces maximum performance and drilling versatility.

BALL MOTION

With its Royal Shine Finish, the **Edge** skids effortlessly through the front, saving axis rotation for the backend to provide greater entry angle to the pocket for superior pin action. The **Edge** will provide extremely versatile ball motion giving you the ultimate confidence to perform on medium-oily to light lane patterns.

Reaction Setup

The **Edge** can be drilled using the standard drilling techniques developed for symmetric core bowling balls.

Lightweight Engineering

At Brunswick, the unique core shape of each individual ball is used for weights from 14 to 16 pounds. This approach to lightweight ball engineering provides bowlers with consistent ball reaction characteristics across this weight range. At 13 pounds, Brunswick uses a generic core shape with a RG-differential that is close enough to the 14 to 16 pound shape so the same drilling instructions can be used.

	16 LB	15 LB	14 LB	13 LB
RG-MAX	2.577	2.589	2.605	2.614
RG-MIN	2.527	2.539	2.555	2.574
RG-DIFF	0.050	0.050	0.050	0.040

SPECIFICATIONS

Hook Potential	Low (10)	150	High (260)
Length	Early (25)	125	Long (235)
Breakpoint Shape	Smooth Arc (10)	100	Angular (150)
RG Differential	Low (0)	.050	High (.060)
RG Average	Center Heavy (1)	5.1	Cover Heavy (10)

- Medium RG Symmetric Core
- Honor Roll Solid Reactive Coverstock
- 2-Color, Light Red / Dark Red Solid
- Hardness: 73-75
- 500; 2000 Siaair Micro Pad; Royal Shine
- Part No. 60-105630-93X

MAINTAIN YOUR BALL REACTION

Brunswick recommends the following procedures to maintain and restore the reaction characteristics of your Brunswick bowling balls:

1. Clean your Brunswick ball with **Brunswick Remove All** or similar ball cleaner after every use to reduce oil absorption.

2. If you think your Brunswick ball has lost some of its “out of the box” reaction, restore the ball to its original factory finish listed on the product information sheet. This is especially important for balls that are highly sanded or polished. Sand to 500-grit Siaair Micro Pad then use **Royal Compound and Royal Shine by Brunswick** to restore the original factory finish on high gloss polish balls. Sand to 500-grit Siaair Micro Pad then use **Royal Compound by Brunswick** to restore the original factory finish on Royal Compound balls. For dull balls, wet sand with the Micro Pad grit listed on the product information sheet.

3. If there is a visible track on your ball, have your pro shop use a Haus or similar resurfacing machine to remove the track then restore the ball to its original factory finish. This service is available, for a fee, at many pro shops.

4. If your ball has more than 50 games on it, you may be able to increase mid-lane and back-end hooking action by removing oil from the coverstock. Remove the oil from the ball by gently warming it with either the **Revivor** or **Rejuvenator** pro shop devices that have been designed for this purpose. The service is available, for a fee, at many pro shops. Brunswick testing has shown that by combining the restoration of the factory finish, resurfacing of the track and oil removal, your Brunswick ball can maintain its original “out of the box” reaction for hundreds of games. **Do not use a home oven to remove oil. Temperatures cannot be adequately controlled and the ball may crack.**

5. Absorbent materials sold by other bowling ball manufacturers to remove oil can also be used on Brunswick bowling balls. Information to date seems to indicate that absorbent materials have a more limited ability to remove oil than warming. You may be disappointed with results on heavily oil soaked balls.

NOTE: Oil soaked balls tend to traction less in the oil and respond less to the dry boards on the lane. If you are matching-up using an oil soaked ball on wet/dry or broken down lane conditions, removing the oil from the ball will significantly change your match-up and possibly create undesirable over reactions.
