

Technical Specifications

Part Number: **60-103913-93x**

Color: **Black Pearl**

Coverstock: **Skid/Snap Reactive**

Surface Finish: **Polished**

RG Max: **2.608**

RG Min: **2.561**

RG Diff: **0.047**

Performance Characteristics

The Revolution Titan has been designed for international bowlers on the lane conditions they typically encounter. The Titan features a high RG core with a medium-high differential RG. This cover heavy core combined with the skid/snap reactive coverstock allows the Titan to be clear the front part of the lane easily but still provide a strong skid-snap type reaction in the backend of the lane. The core and coverstock combination of the Titan work together to create a ball that is very versatile and can be used over a wide variety of drier lane conditions to provide superior reactions. Polished out of the box the Titan will be a superior choice on medium-dry to dry lane conditions. The surface of the Titan can be dulled to provide excellent reaction on medium oiled lanes.

Layout Techniques

The Titan can be drilled like other standard two-piece ball designs. With an RG Differential of 0.047 this ball will create a large amount of track flare for most bowlers. Bowlers with average physical games can use stronger leverage type layouts to get good reaction on medium-oily lane conditions and label type layouts on drier lanes. Bowlers with stronger physical games can also use leverage layouts on medium conditions and label type layouts with the pin above the fingers to get the ball down the lane while maintaining a strong backend reaction on drier lane conditions.
