EMB™ PEARL — Don't let its good looks fool you. The EMB Pearl is designed for pure performance. The EMB Pearl features the winning combination of Track's dynamic patented HyperActive™ core technology and ProTracktion™ Plus pearlized shell, but with a bit more snap added... for more than just good looks. The end result? A good-looking ball that looks good going through the pocket.

Note: Performs great on oily to medium oily conditions.

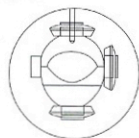

#V77-48

EMB™ — If you want exceptional ball motion, here it is. The Track EMB (Elliptical Mass Bias) particle ball features Track's HyperActive core technology which is combined with our proven ProTracktion Plus cover for a whole new level of performance. The dynamics of the EMB elliptical-shaped core boasts a bigger "sweet spot" at the breakpoint and more pronounced backend motion. This produces a sharper entry angle and a continuous move through the pocket for explosive action. Go ahead. Be *biased*. We are!

Note: This ball performs great on wet/dry conditions.

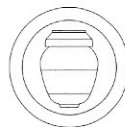

#V27-48

HEAT 2™ PEARL — Watch the competition sweat when you reach for your Heat 2 Pearl. Our pearlized Pegaxis Pro™ cover wrapped around our Power Rev™ core delivers the snap, crackle, and pop you've come to expect from Track. The Heat 2 Pearl delivers more length and gets through the heads and midlane, right up to the breakpoint with ease. Then, it unleashes a commanding snap to the pocket, kicking out those stubborn corner pins. So if you want to fire up your game, grab a hold of the ball that sets a blazing pace—the new Heat 2 Pearl.

Note: This reactive ball performs best on medium to dry conditions with clean backends.

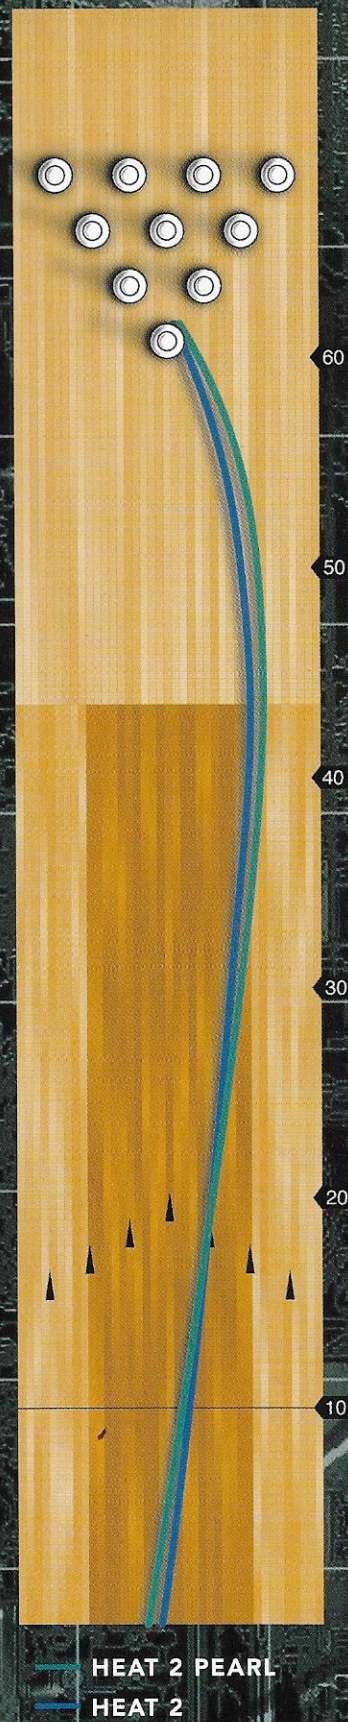

#V57-10

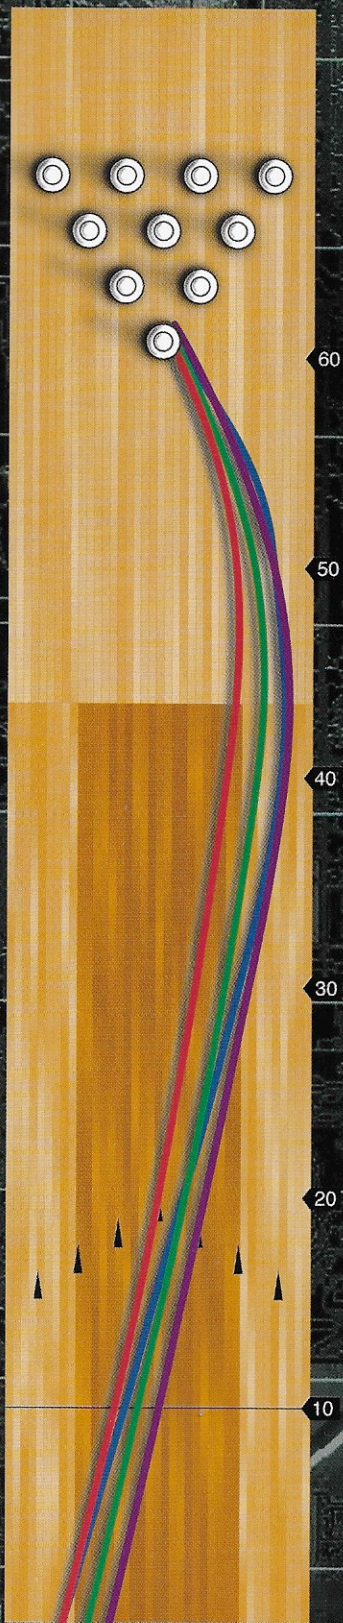

HEAT 2™ — Turn up the temperature on the competition. The Heat 2 continues the winning tradition of the original Triton Heat™. Created for dry backends, the Heat 2 is much stronger than the Triton Heat when it hits the breakpoint. Its Power Rev core technology combined with our advanced Pegaxis Pro coverstock delivers impressive power and outstanding performance.

Note: Performs well on fresh to medium conditions with clean backends.

#V22-51

— ENFORCER
 — SILENCER
 — ASSASSIN
 — AVENGER

ENFORCER™ — Revenge has never been sweeter. The Enforcer's Power Rev™ core combines our basic design from the Triton Heat™ with an added flip block on top so you can drive straight through the heads. And with our ProTraktion™ particle coverstock, the Enforcer tames the lanes with a tremendous backend reaction and the most hook potential of any Track ball ever designed to date.

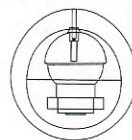

Note: Performs ideally on oily conditions due to its strong cover. Not meant for medium to dry conditions.

#M98-48

SILENCER™ — It puts pins to sleep and egos to rest. It's the Silencer. It features a modified 4-piece design including a Power Rev core wrapped in our state of the art modified, multi-colored ProTraktion coverstock. Trust us, with this kind of performance, you won't stay silent for long.

Note: Aggressive arcing ball on heavy oil conditions.

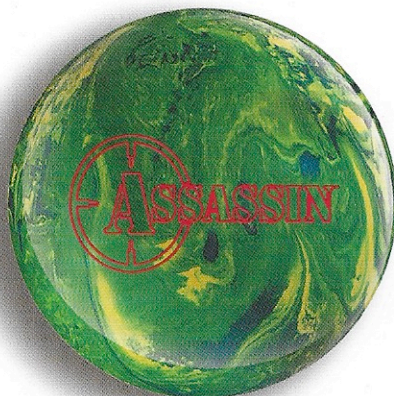

#N60-20

ASSASSIN™ — The pins will never know what hit 'em. The Assassin's modified 4-piece design, Power Rev core and ProTraktion multi-color particle coverstock let you take perfect aim. This ball always hits its mark. The flare potential is medium to high and the backend reaction is deadly.

Note: Good on oily to medium oily conditions.

#N40-10

AVENGER™ — The pins must be punished. Cleaner through the front part of the lanes, the Avenger retaliates with the most powerful backend of any ProTraktion particle balls. Ideal for a variety of lane conditions, this aggressive ball sets a new standard for backend reaction. The Avenger. Go ahead, make your day. Hook the lane!

Note: This big flare particle ball (high-system) has a very strong backend on oily conditions.

#V01-52

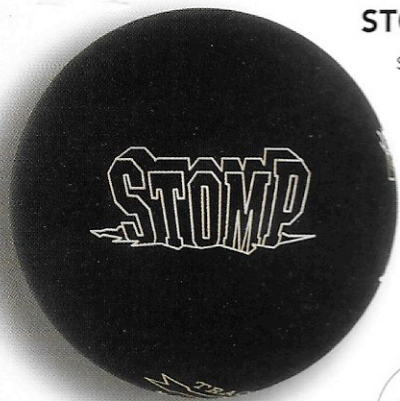

STOMP BLACK GOLD™ — It's another smashing success. The new Stomp Black Gold hooks its way through medium/heavy oil with the killer combination of our R.E.M.™ (Reactive Energy Magnified) coverstock technology with Gold Mica particles surrounding our remarkable Dual Flip Block Core. This technology increases flare potential and produces more mid-lane

roll. It's sure to make an impression on the competition and the pins.

Note: This big flare reactive ball (high-system) has a very strong backend.

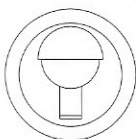

#N79-50

PEARL STOMP™ — The competition will be green with envy. The Pearl Stomp features our proven Core2™ Technology design combined with our PowerPlus™ III pearlized coverstock. With its reduced RG differential (flare potential) and our pearlized coverstock, the Pearl Stomp easily gets further down the lane before making a dramatic turn on the backend.

Note: Good for medium lane conditions.

#N13-15

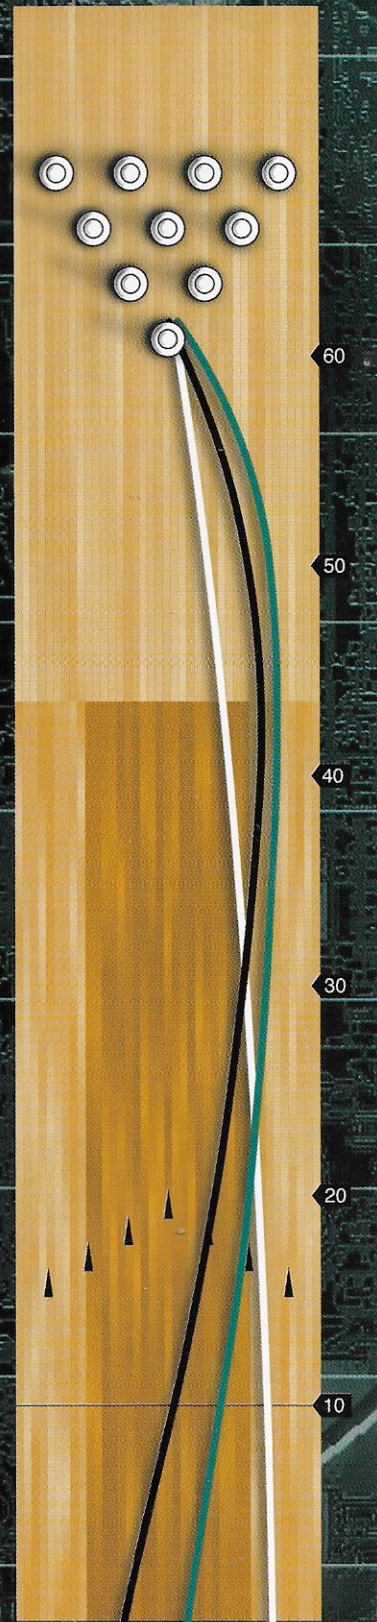

SUGAR RAY LEONARD BOXING GLOVE BALL —

We don't advocate violence. Much. The Sugar Ray Leonard Boxing Glove Ball, Track's debut clear polyester ball, is encased with a replica of Sugar Ray's trademark red boxing glove.

It's hand painted with the same methodical attention to detail which Sugar Ray was known for in dispatching his opponents. It even comes with his engraved signature!

DOUBLE TOTE BAGS — Got stuff? We make room.

These bags are perfect for shoes, accessories and two Track high-performance balls. Made of durable Cordura with heavy-duty support rings.

Black #281-02-16

Teal #281-18-16 (not pictured)

TRACK 2-BALL WHEEL BAGS — Packed with

features. Includes: non-slip adjustable shoulder strap, padded lockable retractable handle grip, metal hardware, wide u-top zipper opening, shoe shelf, two sturdy molded ball cups, side carrying grips and wide-set wheels. Both the Navy and Maroon bags feature outside pouches on both sides of the bag. Note: Locking feature not available in our newest version – the Black 2-Ball Wheel Bag.

Navy #J03-23-14

Maroon #J03-48-14

Black #J03-02-13

TRACK 3-BALL WHEEL BAGS —

Extra space for extra stuff. Features include: non-slip shoulder strap, locking retractable handle grip, metal hardware, shoe shelf, three sturdy molded ball cups, side carrying grips and wide-set wheels. These bags also feature a portable accessory bag. Both the Navy and Maroon bags feature outside pouches on both sides of the bag.

Note: Locking feature not available in our newest version – the Black 3-Ball Wheel Bag.

Navy #J04-23-13

Maroon #J04-48-13

(Black, Pine, and Navy also available in XXXL)

TRACK MAGIC™ — The ball polishes and cleaners that keep you ahead of the game. ProTraktion™ Polish increases backend reaction on particle technology coverstocks. Clean 'N Dull™ restores urethane and reactive balls for consistent action on oily lanes. Clean 'N Sheen™ gives reactive resin, urethane and polyester balls a base coat for more skid. Reaction Plus® adds hitting power and tackiness to reactive balls. Magic Shine™ leaves an incredible shine and a tacky finish resulting in increased hook on the backend. And Clean 'N Polish™ is an all purpose high-gloss finish to increase length and delay hook on medium to dry lanes. Whatever your needs, there isn't a better line of polishes and cleaners than Track Magic™.
