

synergy (sin'ar jē) n. The simultaneous action of separate components which, together, have a greater total effect than the sum of their individual parts.

A TECHNICAL KNOCK OUT.

TRACK has taken the best of the best and Synergized it. SYNERGY™ includes the optimum characteristics of today's most successful high performance balls. SYNERGY™, by definition, is the simultaneous action of separate components which together have a greater total effect than the sum of their individual parts. In bowling, this phenomenon creates more hitting power, a greater angle of entry and improved carrying percentages. Bowlers will experience increased revolutions and dramatic hooking action in the backend of the lane. TRACK's patented Powertech Ceramic Core design yields the highest C.O.R. (coefficient of restitution—which is a measure of energy transferred from the ball to the pins) in the industry. Significantly higher than any of our competitors' products. Maximum hit, maximum hook and maximum scoring potential. We have created the most efficient, destructive hitting machine allowable under American Bowling Congress specifications. The new SYNERGY™. Technically speaking, it's a knock out.
