

USACT – Deep Space

Coverstock

Reactive
Color: Green Pearl / Chrome
Hardness: 77-79

Factory Finish

High Gloss Polish

Available Weights

13-15 Pounds

Core Dynamics

Ultra-Low-RG

RG Max: 2.513
RG Min: 2.463
RG Diff.: 0.050
Average RG: 2.6

Performance

Hook Potential: 130
Length: 90
Typical Breakpoint
Shape: 80

Reaction Characteristics

The USACT-Deep Space uses a hybrid coverstock to create a more even reaction that will deliver improved mid-lane recovery when compared to the USACT-Astro.

In the mid-lane: The Ultra-Low RG core used in the USACT-Deep Space provides strong mid-lane recovery and improved traction in the oil with a smoother, more effective reaction off the dry. This combination reduces over/under reaction by making the wet play less wet and the dry, less dry, effectively allowing the bowler to create more area.

On the back-ends: The USACT-Deep Space is powerful and continuous from the breakpoint through the pins. Improved traction in the oil allows the USACT-Deep Space to bite through the carry down and aggressively change direction without breaking loose from the lane. The strong rolling characteristics of the Ultra-Low RG core make this move more readable allowing you to open up the lane.

At the pins: The USACT-Deep Space creates lower, more active pin action for improved carry.

Utility

•**Out of the Box:** With its High Gloss Polish surface the USACT-Deep Space will match up well on medium-dry to medium-oily lane conditions.

•**When dulled:** The USACT-Deep Space hooking action will increase and its arc will become more even, creating a better match-up for oily lane conditions and further smoothing over/under reactions seen on wet/dry lane conditions.
