

JUST IN TIME FOR TOURNAMENT SEASON: AMF DELIVERS MASSIVE AMOUNTS OF HOOK

Review:

The Mega Friction is the newest introduction from AMF and the most aggressive AMF ball to date. How aggressive you ask? Well, they stamped the warning label right on the ball: "WARNING! This Ball Hooks." How bold is that?

Coverstock:

F81 reactive resin. It should be noted that the Mega Friction proved versatile in testing, and while polishing and higher

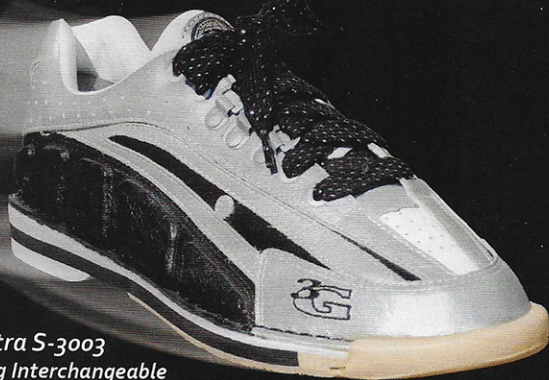

grit sandpapers allowed tweaking for less than the heaviest oil conditions, make no mistake; this ball needs and craves oil.

Core: Symmetric core with a 2.502 R.G. and a 0.042 Differential which provided a strong motion throughout the ball path.

* Worth noting: the Mega Friction did not puke early as so many aggressive balls have a tendency to do but read the midlane and provided a strong continuous motion through the pin deck.

POWER STARTS FROM THE GROUND UP!

*Tour Ultra S-3003
Featuring Interchangeable
Heel & Sole Technology*
