

TERMINAL Velocity

For Those That Like To Strike Hard

The design team at AMF300 has done it again. Introducing the Terminal Velocity™. This will be the most aggressive ball to date for AMF300. We have refined proven core technology from the TNT™ and added a stronger base resin to our strongest particle to date. Hundreds of hours of core/cover development have gone into this project. We at AMF300 know if you are in the market for a strong heavy mid-lane ball that still has the ability to clear the front part of the lane... this is a must have for you.
