

"WITH THIS BALL I COULD ROLL STRIKES IN THE PARKING LOT."

-Pro Bowler

The pros are raving about the AMF Angle. Here's why-

Urethane: The best scoring opportunity you can buy.

The AMF Angle is the world's first urethane bowling ball. Because of its urethane coverstock, the AMF Angle should give you more strikes than any non-urethane ball on a wider variety of lane conditions.

Because the Angle is urethane, it skids easily through the heads, grabs the lane better, and hooks more sharply into the pocket than any non-urethane ball.

That's why the Angle is able to approach the optimum 9-degree strike angle better than any non-urethane ball.

In fact, now we've got performance that proves the theory behind the Angle.

Be a winner. Have an Angle.

No wonder the pros predicted: "The AMF Angle will dominate the tour." And that's exactly what it did during its introduction on the winter tour.

All in all, the Angle should give you higher scores almost anywhere.

Maybe even in the parking lot.

IF YOU WANT TO BE A WINNER, YOU'VE GOT TO HAVE AN ANGLE.
