

THE NINJA™ REACTS AND ATTACKS.

The Ninja's dual-pour weightblock construction provides an axiomatic weightshift for a transfer of energy and accelerated roll.

The AMF Ninja makes a move to the pocket so sudden, so severe and so powerful, it can only be described as whiplash. The Ninja features a reactathane™ coverstock wrapped around a double-deadly, dual-pour weightblock to deliver incredible reaction and absolutely deadly pin action.

The secret to the Ninja's drive, torque and hitting power is the patented double-deadly, dual-pour weightblock. As the Ninja begins its aggressive move to the pocket, the inner core takes control and that's where the fun starts. The dual-pour weightblock construction provides an axiomatic weightshift for a

transfer of energy and accelerated roll. This results in lethal hitting power for increased carry.

The reactathane™ coverstock is what's going to carry you further down the lane than you've ever been before. The double-deadly, dual-pour weightblock is what allows you to make the most of it. Together, they make the AMF Ninja the only ball offering react and attack technology. It costs a little more to be a Ninja owner. But, that's because the Ninja delivers more pins per dollar than any other ball you can buy.
