

# THE CAT IS OUT OF THE BAG.

## Introducing the AMF Bobcat™ bowling ball. Superior recoil action for pin-scattering power.

The high torque recoil action Bobcat is available in Blue or Teal. Weights are 10, 12, 14, 15 & 16 lbs. Durometer hardness is 77-78.

AMF Bowling, the company that introduced the hugely successful Cobra, now offers another outstanding performer. The AMF Bobcat.

Its power comes from a lane-hugging epicenter weightblock that's surrounded by an elastisized urethane exterior. They combine to deliver a high torque recoil action at the point of impact. The result is a low pin-scattering effect that eliminates high flying pins that some more expensive urethane balls can deliver.

Like our Cobra, the Bobcat's unique performance characteristics are a direct product of design, manufacturing and professional testing. So if you're ready for a ball that explodes in the pocket, but won't hit hard in yours, get your hands on an AMF Bobcat. Other balls seem tame by comparison.
