

THE COBRA™ STRIKES.

The Cobra's computer designed two-piece construction features 71% more urethane and a strike-coil weightblock.

When the Cobra is unleashed, no pin is safe. The Cobra tracks its prey with incredible precision, and penetrates the pocket with lethal force.

That's because its two piece construction offers a strike-coil weightblock developed through computer design. A strike coil that delivers power and drive at the moment of impact. The Cobra's shell contains 71% more

urethane for less pin deflection and smoother release. What's more, the Cobra will do its stuff whether it's been drilled with standard or advanced techniques.

So if you're ready for a ball that's different from the rest of the species, get your hands on a Cobra. And don't worry. With **AMF** AMF's name on it, you won't be bitten. **Roll With A Winner**
