

Fusion and Cold Fusion: Engineered for explosive power that begins at the core.

Del Warren, Ball Designer

With Fusion and Cold Fusion, we're generating a whole new world of versatile, high-performance balls: Balls that fuse the control of a light-bulb core with the awesome power of a unique *dual* mass bias, for stronger mid-lane performance with a higher spin rate, more hook, and a higher carry percentage.

For maximum match-up, we're making this state-of-the-art technology available in two models: Fusion, with a lane-grabbing VEER II particle cover. And Cold Fusion, with Super-Flex coverstock for a later break point. So no matter which approach you take, you can count on Fusion and Cold Fusion to put the bang back in your game!
