

THE SUMO™ HAS THE POWER.

A patented flywheel weightblock design delivers torque and energy to make the Sumo the heaviest hitting ball in the history of bowling.

AMF Bowling, Inc. is pleased to introduce the heaviest hitting ball in the history of bowling... The AMF Sumo. The Sumo's new technology revolves around a crank, countercrank energy release system that promises to change the way you think about bowling balls, forever.

Most balls feature 3 1/2 ounces of topweight to generate torque and stored energy. The Sumo has a full 5 1/2 ounces of effective topweight, offset by 2 ounces of effective counterweight. This produces a backend flip that has to be seen to be believed. Best of all, the flywheel weight-

block is surrounded by a versatile cover-stock, ideal for all lane conditions and especially suited to the new 3 units of oil standard of lane dressing.

The Sumo gives your game raw, unrelenting power. It uses the laws of physics to allow 16 lbs. of mass to hit with 22 lbs. equivalency. The result is a wider and deeper pocket area than ever before. The AMF Sumo. It rolls heavy and it hits hard. Nothing's ever knocked them down like a Sumo.
