AZO balls are the best combination
of length, hook, and pin bustin'
power on the market today

Carbide particle technology
generates higher friction for
increased hooking power

AZO Sets New Standards for Hard Hitting Balls.

ON THE AZO CARBIDE BOWLING BALL — **"The Drastic Spec-R... is the best combination of length, hook and pin bustin' power we have seen** from this small West Coast manufacturer. While the AZO line is not well known to the general bowling populace, this ball is well worth the effort to find... At the pocket, this one swells up like the Hulk ripping off a shirt and rips the pins to pieces... This was brought to our attention by one of the mechanics during our first test set. He asked us about the ball I was using and showed us some pins we had shattered... The Drastic Spec-R will not automatically hook for you... but it does provide enough power and entry angle to possibly strike more and — who knows? — maybe break a pin or two along the way"

ON THE AZO ILLUSION BOWLING BALL — **"This is a great addition to the AZO line. An exceptional example of a ball that simply hits the pins with greater power than some of the big boys...** We were able to swing 15 to 7, play up the wall, swing to the outside and play up the boards outside the top hat. Same results: length, great read in the mids, a sharp back-end move and that AZO 'crack' at the pindeck... We fell in love with the ball on the house shot... The Illusion could replace many available balls... not just because of its ability to get to the hole — most balls can do that — but because of the devastating 'crack' hit at the pins."
