Conventional urethane. Reactive urethane. Double your chance of winning with the best of both worlds. The Double Helix has significantly more cover weight than its predecessor; traveling farther on its conventional urethane power stripe before transferring its power onto the reactive urethane endcaps. It's also the first Quantum in history with a redesigned and modified Double Mushroom core—giving Double Helix twice the power at the pocket, but keeping Quantum's patented Dynamic Integrity throughout all weights.

**Double Helix: Length: 7.5; Backend: 10;
Track Flare Potential: 10; Hook Potential: 17-9;
Center/Cover Heavy: 3.5.**

For a limited time, take home this Indigo spare-saver absolutely free. The very first (and only) polyester polished blue Quantum, with gold engraved logo, is yours with the purchase of any Double Helix.[®]

The original Quantum Helix: the first galvanization of conventional and reactive urethane.
