

Play with FIRE

The Fire Quantum®

Introducing the first ball ever created using Condensity Technology. BTV technicians have compressed a new reactive urethane formulation around Fire's innovative Flow-Thru Mushroom Core. Producing an unsurpassed coefficient of restitution, and powering Fire through the pins with unstoppable action. Combine that with Fire's Hook Potential - 17 - and you've got all you need to burn the competition. **FIRE SPECS: Length: 4.5; Backend: 10+; Track Flare Potential: 7.6; Hook Potential: 17-9 (dull/shiny); Center Heavy/Cover Heavy: 3.2.**

Condensity Technology

This revolutionary new production technique compresses more urethane into each Fire. So no air is tolerated. No momentum is lost. No pin can escape.

Flow-Thru Core

Core channels allow urethane to flow through. Instead of only encapsulating the core. Virtually eliminating core separation, and delivering more faithful reaction characteristics: Fire has more length, backend and hook, plus significantly improved skid-snap reaction.

Dynamic Integrity

BTY's Mushroom Core design, in alliance with advanced modeling techniques, gives Quantum balls the most unique patented benefit in bowling: Quantum's lightweight balls react the same as sixteen pound balls.

Authorized Quantum Dealers

BTY's line-up of technological advancements are impressive on paper. Even more impressive in performance. For more information, consult your authorized BTV and Quantum dealer, or call the Quantum Customer Information Line for tips, updates and dealer access.
