

Sage Quantum

The most reactive cover stock to date. The most explosive core design yet. And the most hook ever. Period. Sage Quantum brings "The Best of..." ball qualities to a single sphere—challenging the outer limits of hook potential and taking backend reaction *literally* off the chart.

12-16 lbs. • Hook Potential 19-11 (Dull/Shiny) • Length 1-2 • Backend 10.5

T R O L

Condensity Technology

A process that compresses a reactive urethane formulation for an unsurpassed coefficient of restitution. Or, simply said, pin carry with the momentum of a runaway train.

Flow-Thru Core *

This patent-pending process virtually eliminates core separation, allowing the Quantum line to deliver hook characteristics for a wide range of bowling styles and lane conditions.

*Available in all 2-piece Quantums. Consult your Authorized Quantum Dealer for specifics.

Dynamic Integrity

This patented Quantum concept gives lightweight balls the same reaction potential as heavier ones. Developed by Brunswick Technology Ventures (BTV).

Authorized Quantum Dealers

Only the most exceptional dealers can measure up to BTV's strict set of standards.

Core insets shown are for 16 pound Quantum designs.
