CERAMICORE™ / FLEXCEL™ G2

**Piranha/C**
CERAMICORE

The New Piranha™/C from Columbia 300 will improve any bowler's striking ability. Constructed of FLEXCEL™ G2 reactive urethane and the exclusive parabolic-shaped core surrounding the dense molecular weight of the CERAMICORE™, Piranha™/C generates an explosive release of energy unmatched by any bowling ball in the industry. The unique combination of the CERAMICORE™ satellite rotating closely around the roll axis makes the Piranha™/C a heavy rolling ball with high flare potential and excellent energy retention. All this works together to create the optimum angle of entry into the pocket. The dense, offset CERAMICORE™ transfers more of the core's centrifugal hitting force to the heaviest part of the pins producing more striking power. Join the feeding frenzy and pick up your Piranha™/C today!

T E C H N I C A L D A T A

- Coverstock: 100% FLEXCEL™ G2 urethane by BASF.
- Core: Parabolic-shaped assembly with CERAMICORE™ diamispheric satellite.
- Construction: Modified 2-piece.
- Pin Placement: Ranges between 0" and 4" from center of gravity (CG).
- Hardness: 75 - 77
- Available Colors: Baltic Blue/Neon Yellow engraving.
- Available Weights: 14, 15 & 16
- Driller Friendly: Adaptable to any method.

WARNING DO NOT DRILL BALANCE HOLES DEEPER THAN 2 3/4 INCHES.
