**INTRODUCING THE NEW
REACTION RIP™.**

If you really want to let 'er rip, you need the new Reaction Rip. The latest in the Reaction line of high-performance bowling balls from Columbia 300®, the Reaction Rip produces more length through the front part of the lane and rips it up on the backend. Featuring a striking Emerald Pearl cover, the Rip's core is surrounded by an enhanced version of our pearlized Super-Flex™ coverstock which creates more friction between the ball and dry lane surface for a sharp turn on the backend. In short, the Reaction Rip lets you tear up the lane while the competition tears up their scorecards.

Columbia bowls the world over.
