

Rock

PLAY LOUD.

Introducing the Rock™ and Rock™ Pearl. Two bad boys that never miss a beat.

Both feature our exclusive TEC²™ shell. Unlike hollow glass microspheres or hard particles found in other coverstocks, TEC² incorporates an enhanced lane-gripping additive so each ball bites through oil and hooks early. The Rock strikes a perfect balance between track flare and hook potential without flipping too quickly at break point. And the Rock Pearl is the first pearlized ball to hook early in medium to heavy oil while maintaining a powerful backend reaction. The Rock and Rock Pearl. They move. They groove. And they're performing at a pro shop near you.
