

The power is on.

The SURGE™ from Columbia 300, has new Traction Afflair MICA incorporated into our proven Super-Flex Resin coverstock. This, in combination with the enlarged center section of the large body core, results in more mid-lane revolution from the SURGE. This gives the SURGE more mid-lane roll (earlier break point) and a continuous backend motion. This earlier break point virtually eliminates any hang, which can result from oil carrying down on the backend. Power up your game with the all new Electric Blue Surge.

COLUMBIA 300

Columbia bowls the world over.
