HYPERSHOCK TECHNOLOGY

Because how the ball goes through the pins matters

HYPERSHOCK TECHNOLOGY

HyperSHOCK Technology is an energy enhancement material added to the outer core to help power the ball through the pins. This viscoelastic material works to control the influence pins have on the balls motion through the pin deck. The Swerve, with HyperSHOCK Technology, not only gets you to the pocket, but drives through the pins like no other bowling ball on the planet.

REFLEX COVERSTOCK

Reflex is a high traction coverstock designed to transfer greater amounts of energy directly to the core through its enhanced crosslink dense polymer matrix.

SWERVE CORE

For the Swerve core, we lowered the strength of the Mass Bias to make it more driller friendly and allow the core to perform well for the masses.

This core yields a slightly stronger mid-lane read than the typical symmetrical shape, while maintaining the predictability symmetrical balls provide.

COLOR	SOLID BLACK/SCARLET/NAVY
COVERSTOCK	REFLEX SOLID
FINISH	500/1000/2000 ABRALON®
CORE	SWERVE
LANE CONDITION	MEDIUM TO HEAVY OIL
WEIGHTS	12-16 POUNDS
MB	.007

CLEAN N' DULL RECOMMENDED

	RG	DIFF
12	2.60	.039
13	2.53	.055
14	2.48	.057
15	2.47	.052
16	2.47	.048
