SWERVE GT

HYPERSHOCK TECHNOLOGY

HyperSHOCK Technology is an energy enhancement material added to the outer core to help power the ball through the pins. This viscoelastic material works to control the influence pins have on the ball's motion through the pin deck. The Swerve line, with HyperSHOCK Technology, not only gets you to the pocket, but drives through the pins like no other bowling balls on the planet.

SWERVE GT

COLOR	BRONZE/PURPLE/BLACK	WEIGHTS	12-16 LBS.
